The Times Index, 2013-06 Indexes the Times Sunday times and magazine Times literary supplement Times educational supplement Time educational supplement Scotland and the Times higher education supplement **Psychology and Mathematics Education** Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity Impact Assessment of Stem Initiatives in Improving Educational Outcomes Pallavi Amitava Banerjee, 2017-08-09 Impact assessment of STEM initiatives in improving educational outcomes explores research evidence and labour market reports to show why successive governments think STEM education matters It maps the policy background and the STEM crisis in the UK which led to the launch of the STEM informal education sector These schemes funded by the government educational charities and private organisations have now mushroomed at the local and national level In the midst of so many activities for various age groups do we know what works or works better for specific group of students Does one size fit all The book provides a detailed report of a longitudinal national evaluation conducted in the UK by making use of official datasets The activities evaluated here have not had a major influence on educational outcomes such as improved standardized national test results or increased STEM subject choices The robust evaluation protocol described in this well structured and thoughtful text will help schools to decide what works best for the students activity providers to evaluate long term outcomes for the activities they run researchers to replicate the protocol for similar activities in other settings Masters and PhD students understand how evidence from research can be used to inform policy and practice The results and implications combined with the recommendations made here will interest all those who are directly involved in

the delivery of these enrichment and enhancement activities practitioners using evidence policy makers the research community and schools wanting to run their own evaluations
