Education ,1999 [Mediterranean Diet](#) Donato F. Romagnolo, Ornella I. Selmin, 2016-02-29 This text is an especially timely new text as the number of studies focusing on the impact of the Mediterranean diet on disease prevention increases every year. The fundamental question addressed in this text is how food components and behavior of the Mediterranean diet reduce the risk of chronic diseases. In depth chapters provide an overview of preclinical and clinical studies on Mediterranean dietary patterns, food components and lifestyle and their impact on health and disease. Large scale omic approaches are highlighted to educate the reader about the molecular mechanisms through which specific components of the Mediterranean diet improves health and the opportunities and challenges for translating into practice the food recommendations of the Mediterranean pyramid. The volume concludes with information about the nutritional adequacy of Mediterranean foods and provides selected recipes. [Mediterranean Diet Impact on Health and Disease](#) will be of great interest to students, clinicians and scientists engaged in promoting health through nutrition and physical activity.

Personal Nutrition Marie Ann Boyle, 2001 This text covers the essentials of nutrition at a basic level with little discussion of physiology or biochemistry, emphasizing the practical application of nutrition principles to everyday life. The book's topics are organized in the same way as most introductory courses are organized but all of the information is presented in just eleven chapters and 600 pages, making it the briefest textbook available. The text's many unique and interactive features such as Nutrition Scorecard and The Savvy Diner reflect its consumer oriented approach and invite the reader to explore ways in which to make healthful nutrition choices.
