Auditorium Design Guidelines

Auditorium Design Guidelines:

Auditorium Acoustics and Architectural Design Michael Barron, 1993 Modern concert halls and opera houses are now very specialized buildings with special acoustical characteristics. This book is an important resource for architects, engineers and auditorium technicians.

Theatre Buildings Association of British Theatre Technicians, 2010-06-08 The Association of British Theatre Technicians produced its first guide to the design and planning of theatres in 1972. Revised in 1986 it became the standard reference work for anyone involved in building, refurbishing or creating a performance space. *Theatre Buildings* a design guide is its successor. Written and illustrated by a highly experienced team of international theatre designers and practitioners it retains the practical approach of the original while extending the scope to take account of the development of new technologies, new forms of presentation, changing expectations and the economic and social pressures which require every part of the theatre to be as productive as possible. The book takes the reader through the whole process of planning and designing a theatre. It looks in detail at each area of the building: front of house, auditorium, backstage and administrative offices. It gives specific guidance on sightlines, acoustics, stage engineering, lighting, sound and video, auditorium and stage formats. Aspects such as catering, conference and education use are also covered. The information is supplemented by twenty-eight case studies selected to provide examples which range in size, style and format and to cover new buildings, renovations, conversions, temporary and found space. The studies include Den Norsk Oslo, The Guthrie Theatre Minneapolis, The Liceu, Barcelona, Les Bouffes du Nord Paris, The RSC's Courtyard Theatre in Stratford on Avon and the MTC Theatre in Melbourne. All have plans and sections drawn to 1:500 scale. The book contains around 100 high quality full colour images as well as over 60 specially drawn charts and diagrams explaining formats, relationships and technical details.

Buildings for the Performing Arts Ian Appleton, 2012-05-31 This Design and Development Guide is an essential book for those who are involved in the initiation, planning, design and building of facilities for the various performing arts, from local to metropolitan locations. It includes the stages in the development decisions to be taken, information requirements, feasibility and advice necessary in the design and development of a new or adapted building. Part one of this guide provides the background information about the organisation of the performing arts, the prevailing issues, the client and various building types. In the second part the author deals with the components of design and development, identifying the roles of the client, advisors and consultants, the stages to be achieved, including client's proposal, feasibility, the process of briefing, design and building and eventually hand over and opening night with a consideration of the building use. Studies include the assessment of demand, site requirements, initial brief, building design and financial viability. Information requirements, design standards for the auditorium and platform stage and the support facilities are included. Separate studies focus on the adaptation of existing buildings and provision for children and young persons.
