Wired/Wireless Internet Communications Peter Langendoerfer, Mingyan Liu, Ibrahim Matta, Vassilis Tsoussidis, 2004-01-20 The International Conference on Wired Wireless Internet Communications WWIC was held for the second time following a successful start in 2002 in Las Vegas. The goal of the conference was to present high quality results in the field and to provide a framework for research collaboration through focused discussions that designated future research efforts and directions. The number and the quality of submissions indicate that we are well on the way to establishing WWIC as a major event in the field of wired wireless internet communications. We received around 60 competitive submissions from Europe, North America, the Middle East, and the Far East. Each submission was reviewed by at least two experts, although the majority received three or more reviews. Based on this rigorous reviewing procedure, the International Program Committee selected 26 submissions for presentation and publication in the proceedings. Therefore, we should all expect the quality of a selective conference in this volume. We hope you will enjoy it. The papers selected for presentation at WWIC 2004 were stimulating and of utmost interest. They were organized into eight sessions: 1. Protocol engineering and energy efficiency in wireless networks; 2. Mobility management and mobile devices; 3. Transport layer and congestion control; 4. Architecture implementation and experimentation; 5. Network and protocol modeling; 6. Wireless network scheduling and analysis; 7. Multimedia distribution and group communication; 8. Service discovery. We would like to thank the authors for choosing WWIC 2004 to submit their results. We would also like to thank all the members of the Technical Program Committee as well as the additional reviewers for their effort to provide detailed and constructive reviews.

RF Engineering for Wireless Networks Daniel M. Dobkin, 2011-03-31 Finally here is a single volume containing all of the engineering information needed to successfully design and implement any type of wireless network. Author Dan Dobkin covers every aspect of RF engineering necessary for wireless networks. He begins with a review of essential math and electromagnetic theory followed by thorough discussions of multiplexing, modulation types, bandwidth, link budgets, network concepts, radio system architectures, RF amplifiers, mixers, and frequency conversion filters, single chip radio systems, antenna theory, and designs, signal propagation, as well as planning and implementing wireless networks for both indoor and outdoor environments. The appendices contain such vital data as U.S., European, and Japanese technical and regulatory standards for wireless networks, measurements in wireless networks, reflection and matching of transmission lines, determining power density, and much more. No matter what type of wireless network you design, Bluetooth, UWB, or even metropolitan area network (MAN), this book is the one reference you can't do without. The A to Z guide to wireless network engineering covers everything from basic electromagnetic theory to modulation techniques to network planning and implementation. Engineering and design principles covered are applicable to any type of wireless network, including 802.11, 802.16, 802.20, and Bluetooth. Discusses state-of-the-art modulation techniques such as
