## STANDARD: 7.RP.A.3

Use proportional relationships to solve multistep word and percent problems. Examples: simple interest; tax, markups and markdowns; gratuities and commissions; fees; percent increase and decrease; percent error.

1. Emily borrowed \$500 from the bank. The bank charges 4% simple interest annually. How much interest will Emily owe after 3 years?

2. Daniel buys a new video game for \$60. The sales tax rate is 7%. How much does Daniel pay in total, including tax?

3. Victoria bought a shirt on sale. The original price was \$35, but it was marked down 20%. How much did she pay for the shirt?

4. Jackson works at a restaurant and earns a 15% commission on his total sales. If he sells \$200 worth of meals in one day, how much commission does he earn?

5. Spencer is selling tickets for the school fair. There is a \$2 service fee for each ticket sold. If he sells 25 tickets, how much will the total service fees be?

6. Jenna bought a skirt for \$45 and later sold it for \$60. What was the percent increase in the price of the skirt?

**Linguistic Influences on Mathematical Cognition** Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude

representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing **Resources in education** ,1987-05
