Intended for a general lay person audience or as a non science major undergraduate text the book explains in a non mathematical manner how the ocean circulation and the ocean's interactions with the atmosphere provides the basic underpinnings for global climate and ecology. It then launches into more specific topics of societal relevance e.g. how the coastal ocean and estuaries work sea level variations ocean waves and extreme tsunamis hurricane storm surge and wave damage how ocean temperatures change seasonally harmful algal blooms alternative energy potential and fish recruitment. Whereas some of these applications have a Florida USA emphasis all of them are equally applicable to coastal regions elsewhere.
