*Advanced Modelling Techniques in Structural Design* Feng Fu, 2015-06-15 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques. In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work. *Advanced Modelling Techniques in Structural Design* introduces numerical analysis methods to both students and design practitioners. It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings, earthquake progressive collapse, fire, blast and vibration analysis, non linear geometric analysis and buckling analysis. Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Burj Khalifa, Willis Towers, Taipei 101, the Gherkin, Millennium Bridge, Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems.

Building Information Modeling André Borrman, Markus König, Christian Koch, Jakob Beetz, 2018-09-19 *Building Information Modeling* BIM refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility including its design, construction and operation. In order to exploit BIM methods to their full potential a fundamental grasp of their key principles and applications is essential. Accordingly this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book's content is divided into six parts. Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings as well as methods for process modeling. Next Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes. It presents the different classification systems, discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients and also provides an overview of BIM programming tools and interfaces. Part III is dedicated to the philosophy, organization and technical implementation of BIM based collaboration and discusses the impact on legal issues including construction contracts. In turn Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take off, prefabrication, progress monitoring and operation. In Part V a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects and discuss the approach pursued for the shift toward BIM including the hurdles taken. Lastly Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools and for students in Architecture and Construction Engineering programs.

**Landscape Architecture and Digital Technologies** Jillian Walliss, Heike Rahmann, 2016-02-12 Landscape Architecture

and Digital Technologies explores how digital technologies are reshaping design and making in landscape architecture. While the potentials of digital technologies are well documented within landscape planning and visualisation their application within design practice is far less understood. This book highlights the role of the digital model in encouraging a new design logic that moves from the privileging of the visual to a focus on processes of formation bridging the interface of the conceptual and material the virtual and the physical. Drawing on interviews and projects from a range of international designers including Sn hetta, Arup, Gustafson Porter, ASPECT Studios, Grant Associates, Catherine Mosbach, Philippe Rahm, PARKKIM, LAAC and PEG office of landscape architecture among others the authors explore the influence of parametric modelling, scripting, real time data simulation, prototyping, fabrication and Building Information Modelling on the design and construction of contemporary landscapes. This engagement with practice is expanded through critical reflection from academics involved in landscape architecture programs around the world that are reshaping their research and pedagogy to reflect an expanded digital realm. Crossing critical theory, technology and contemporary design the book constructs a picture of an emerging twenty first century practice of landscape architecture practice premised on complexity and performance. It also highlights the disciplinary demands and challenges in engaging with a rapidly evolving digital context within practice and education. The book is of immense value to professionals and researchers and is a key publication for digital landscape courses at all levels.

**Learning Autodesk Revit 2015** Kristen Smith, Victoria Shipley, 2014-05-01. Learning Revit 2015 is uniquely designed to be an effective learning tool in both self paced and classroom environments. This courseware will take you through the essential areas of Autodesk Revit which will enable you to master the tools needed to efficiently create and document a BIM model. The content is organized in such a way that it intuitively guides you through the design process. In each lesson you learn about the design process or tool, the steps required to be successful and then an exercise that walks you through those steps and options so you experience it in a real world design scenario. After you master the essential aspects of Revit the book then becomes a valuable desktop reference enabling you to dive deeper into the concepts, processes and tools that will make you more productive. The information covered in this manual is written for Autodesk Revit or Autodesk Revit Architecture and is also applicable when working in Autodesk Revit MEP and Autodesk Revit Structure.

*Building Information Modelling (BIM) in Design, Construction and Operations* L. Mahdjoubi, C.A. Brebbia, R. Laing, 2015-09-09.
