ENZYMES

01 Factors Affecting Enzyme Activity

Enzymes are biological catalysts that speed up chemical reactions in living organisms. They are proteins that reduce the activation energy required for a reaction to occur. Enzymes are specific to the reactions they catalyze and are often denoted by their substrate. For example, amylase catalyzes the breakdown of starch into glucose.

02 Key Players

Enzymes are composed of a protein backbone and a side chain. The side chain is called the active site, where the enzyme binds to its substrate. Enzymes are often denoted by their substrate. For example, amylase catalyzes the breakdown of starch into glucose.

TRANSCRIPTION

01 Key Players

Transcription is the process of copying DNA into RNA. It is catalyzed by RNA polymerase, which binds to the DNA template strand and uses it as a template to synthesize a complementary RNA strand. The RNA strand is then released from the polymerase and folded into a functional RNA molecule.

02 Enzymes

RNA polymerase is a protein that binds to DNA and catalyzes the synthesis of RNA. It is composed of a core enzyme and a sigma factor. The sigma factor binds to the DNA template strand and directs the core enzyme to the correct start site.

DNA REPLICATION

01 Key Players

DNA replication is the process of copying DNA into two identical daughter DNA molecules. It is catalyzed by DNA polymerase, which binds to the DNA template strand and uses it as a template to synthesize a complementary DNA strand. The DNA strand is then released from the polymerase and folded into a functional DNA molecule.

DIRECTIONALITY

01 Key Players

Directionality is the process of copying DNA into two identical daughter DNA molecules. It is catalyzed by DNA polymerase, which binds to the DNA template strand and uses it as a template to synthesize a complementary DNA strand. The DNA strand is then released from the polymerase and folded into a functional DNA molecule.

PROOFREADING

01 Key Players

Proofreading is the process of copying DNA into two identical daughter DNA molecules. It is catalyzed by DNA polymerase, which binds to the DNA template strand and uses it as a template to synthesize a complementary DNA strand. The DNA strand is then released from the polymerase and folded into a functional DNA molecule.

NUCLEOSOMES

01 Key Players

Nucleosomes are protein-DNA complexes that are found in eukaryotic cells. They are composed of a core of histone proteins around which DNA is wrapped. Nucleosomes are involved in the regulation of gene expression and the protection of DNA from damage.

Environmental and Molecular Mutagenesis, 1987 **Directories in Print**, 2011 *Handbook of Physiology* John R. Pappenheimer, Gabriel M. Makhoul, Stanley G. Schultz, Brenda B. Rauner, 1977 This volume marks the coming of age of knowledge concerning the neural and endocrine biology of the gut. It is the first volume in the *Handbook of Physiology* to be devoted entirely to this field. It is also the very first volume ever published that deals systematically with the biochemistry, cell biology, molecular biology, pharmacology and physiology of hormonal and neural peptides of the gut. Written by some forty recognized experts, *Neural and Endocrine Biology* details the discoveries of a field that is now just twenty five years old. The early chapters address general topics and provide a broad overview of the field including information on immunocytochemistry of endocrine cells and enteric neurons and the physiological significance of hormonal paracrine and neural peptides. Fourteen of the volume's twenty eight chapters are devoted to individual hormonal and neural peptides, their distribution, pharmacology and physiological and cellular functions. The final chapter offers an overview of recently discovered peptides including pancreastatin and two neural peptides, galanin and calcitonin gene related peptide (CGRP). *Neural and Endocrine Biology* will be a welcome new resource for graduate students, instructors and active researchers and clinicians who need a complete up to date reference in regulatory peptides and gastrointestinal physiology and pharmacology.
