Heat Transfer Enhancement in Chemical Processes Lili Sun,2024-08-14 Heat Transfer Enhancement in Chemical Processes combines process technologies with heat exchange equipment to study heat transfer enhancement. The book provides guidance for the progress of process technologies and the application of enhanced heat transfer equipment. It analyzes the basic principles of heat transfer and summarizes the theories and methods of heat transfer enhancement while also focusing on three representative processes in petrochemical industry including oil refining aromatics and ethylene production. The book summarizes in a systematical way the practical application of heat transfer enhancement in the petrochemical industry from the equipment components the processes and the whole plant. Puts theory into practice providing guidance for the application of scientific research achievements. Integrates process technologies with process intensification providing guidance for process flow enhancement. Combines process with equipment introducing heat transfer enhancement technologies suitable for different processes. Covers the oil refining unit aromatics unit the ethylene plant and its downstream units.

Nuclear Hydrogen Production Handbook Xing L. Yan,Ryutaro Hino,2016-04-19 Written by two leading researchers from the world renowned Japan Atomic Energy Agency the Nuclear Hydrogen Production Handbook is an unrivalled overview of current and future prospects for the effective production of hydrogen via nuclear energy.

Combining information from scholarly analyses industrial data references and other resources this book covers process design for cryogenic processes like air separation natural gas liquefaction and hydrogen and helium liquefaction. It offers an overview of the basics of cryogenics and information on process design for modern industrial plants. Throughout the book helps readers visualize the theories of thermodynamics related to cryogenics in practice. A central concept in the book is the connection between the theoretical world of process design and the real limitations given by available hardware components and systems. Sample topics covered in Process Design for Cryogenics include Cryogenic gases like nitrogen oxygen argon neon hydrogen helium and methane. Thermodynamics Typical cryogenic refrigeration processes including the classic Joule Thomson process the contemporary mixed gas Joule Thomson process and expander based processes like Brayton and Claude cycles. Helium and hydrogen liquefaction and air separation. Process Design for Cryogenics is a comprehensive must have resource for engineers and scientists working in academia and industry on cryogenic processes.

Modular Remediation Testing Systems C. H. Ward,Katharine Balshaw-Biddle,Carroll L. Oubre,1999-08-23 Modular Remediation Testing Systems documents a unique modular testing environment designed for use in the development of remediation technology and for on site selection of remedial technologies. This complete design and operation manual gives you the tools you need to conduct successful cost effective remediation projects. The major attributes of this system the Experimental Controlled Release System ECRS that distinguish it from past test facilities include the

following Portable shippable to the researcher's location or remediation site. Tightly sealable facilitates mass balance. Large pilot scale facility step below full scale demonstration. Flexible testing conditions vadose zone or aquifer chemical release or contaminated soil air sparging or SVE. Easy to construct design drawings developed standard equipment. Easy to operate and maintain easy access standard equipment. Affordable easily shipped and set up reduced regulatory requirements minimal maintenance. Faster tests reduced or eliminated permitting operate within one week of arrival programmable for 24 hour duration. This monograph presents key information needed to design construct and operate similar modular remediation testing systems or to utilize the two existing modular ECRS facilities. The well sealed above ground modular system design minimizes leaks to the environment facilitates mass balances and controls test conditions. This allows for multiple uses with minimal permitting. Modular Remediation Testing Systems is a comprehensive reference for researchers in environmental engineering and for engineering consultants and regulators looking for a pilot scale system. These pilot scale systems are uniquely suited to both research development and real world application at remediation sites.

Advances and Technology Development in Greenhouse Gases: Emission, Capture and Conversion Mohammad Reza Rahimpour, Mohammad Amin

Makarem, Maryam Meshksar, 2024-07-20. Advances and Technology Development in Greenhouse Gases Emission Capture and Conversion is a comprehensive seven volume set of books that discusses the composition and properties of greenhouse gases and introduces different sources of greenhouse gases emission and the relation between greenhouse gases and global warming. The comprehensive and detailed presentation of common technologies as well as novel research related to all aspects of greenhouse gases makes this work an indispensable encyclopedic resource for researchers in academia and industry. Volume 4 titled Carbon Capture Technologies is devoted to efficient technologies utilized for separation that are the heart of controlling carbon made greenhouse gases GHGs. The book starts with a review of carbon capture concepts with a focus on energy penalties as well as the operating pilots and plants followed by a meticulous investigation of different classes of capture methods. Section 2 surveys the absorption process including amines physical absorbents alkaline solvents ionic liquids and deep eutectic solvents nanoparticle enhanced solvents as well as a number of novel materials and structures that are employed to eliminate GHGs utilizing absorption. Section 3 addresses adsorption based strategies with a focus on the role of different solid adsorbents introduces technologies that benefit from membranes and considers different materials utilized in the fabrication of membranes. The final section deals with other as state of the art alternatives in carbon capture. Moreover each section reviews the economic assessments and environmental challenges. Introduces carbon capture concepts and challenges. Describes various absorption and adsorption processes for carbon capture. Includes various membrane technologies for carbon capture.
