can use in their future classrooms The Effect of Number Structure on Addition Computation Amanda Lee Jacobson, 2014

The purpose of this study was to examine the effect of instruction about number structure and explicit number sense routines on elementary students' capacity for addition computation. Current research suggests that students need to be able to identify the representation and meaning of numbers because it may be a precursor to future math development as well as math achievement. Defever, De Smedt, Reynvoet, Sasanguie, 2012. Five first grade students were selected based upon their performance on the AIMSweb math computation benchmark assessment. Classroom observations during mathematical routines and classroom assessments to gauge students' knowledge of number structure also helped determine the suitability of their participation. Students participated in mathematical routines focused on number structure and number sense in a small group during math instruction. Their progress was monitored one time per week through the use of AIMSweb math computation progress monitoring tool during a four week period in the 2014-2015 school year. The research project examined the degree of importance in building number structure and number sense in addition computation and mathematical instruction.

The curriculum based measure in this study was the 2011-12 AIMSweb Mathematic Concepts and Applications M-CAP Mathematics achievement was measured by scores on the 2012 math subtest of the Georgia Criterion Referenced Competency Test (CRCT). Each group received classroom instruction using Learning Focused Schools (LFS) math strategies. The treatment group received additional computer based math instruction. The computer based math instruction in this study was Individual Prescription for Achieving State Standards (iPASS). A correlation analysis examined the ability of the 2011-12 M-CAP fall cut scores to identify risk status measured by student scores on the 2012 CRCT math subtest. A second correlation analysis examined the predictive ability of the 2011-12 winter M-CAP target scores on the CRCT as indicated by the strength and direction of the relationship. Three research questions were investigated: a) Is there a difference in the 2012 CRCT math scores between at risk fifth grade students who participate in computer based math instruction and those who do not? b) Are the 2011-12 fall M-CAP cut scores able to identify fifth grade students as at risk to fail the math portion of the 2012 CRCT? c) Are the 2011-12 winter M-CAP target scores able to predict fifth grade students' performance on the math subtest of the 2012 CRCT? To address these research questions, this study first examined the effectiveness of computer based math concepts and applications instruction on student achievement and its viability as an effective intervention for students identified as at risk to fail end of year state assessments. Secondly, this study investigated the ability of cur
