Thoburn,2009 The educational system has placed an emphasis on reading instruction and assessment Districts are now making a change to place more attention on the area of mathematics The challenge of helping all students at their level of instruction has become more noticeable and systems are beginning to make a change to the response to intervention model More of an importance is placed on monitoring students and ensuring that all are receiving appropriate instruction and interventions Curriculum based measurement in math offers an efficient way to assess and monitor progress in math calculation The current study examines the technical adequacy of a school created math screening tool by investigating reliability and criterion related validity of the measure The relationship between the screening tool the WASL math test and a published math CBM with national norms AIMSweb is examined with a sample of 278 fourth and fifth grade students The screener demonstrated strong reliability evidence and has some evidence for validity Document EasyCBM Norms. 2014 Edition. Technical Report #1409 Jessica L. Saven,Gerald Tindal,P. Shawn Irvin,Dan Farley,Julie Alonzo,2014 Previous norms for the easyCBM assessment system were computed using scores from all students who took each measure for every grade and benchmark season fall winter and spring During the 2013 14 school year new national norms were developed to more accurately proportionately represent reading and mathematics performance by two variables region and student demographic Five hundred students were proportionately and randomly sampled from each of four regions of the country Midwest West Northeast and Southeast Percentiles by region are displayed in tables at the top of each page pp 15 170 for every season grade and measure available on easyCBM To assist in navigating through all of the tables in the document each page contains a heading at the top right listing the season grade and measure In addition the index of all measures found on pages 6 7 serves as a guide through the document A set of norms using a stratified random sample of students by gender and ethnicity race white female white male non white female non white male was also developed Race and ethnicity were aggregated as the count of students with complete data for both categories was insufficient for disaggregation In this process Hispanic students were counted as non white even when lacking a race designation other than white Ethnicity race codes from the most recent Common Core Data published by the National Center on Education Statistics 2010 11 were used in this process Like the norms developed by region these norms based on gender and ethnicity race are displayed in tables at the bottom of each page by season grade and measure In order to provide a deeper look at scores for every region and or gender ethnicity race included in the norming process tables providing summary statistics mean and standard deviation for each region and each demographic group included in the stratified random samples used to generate norms are included at the center of each page All the literacy norms included in this document were calculated based on score values present in 2012 2013 The mathematics measures changed for 2013 2014 so

the norms for both the CCSS Common Core State Standards and NCTM National Council of Teachers of Mathematics aligned math measures were calculated using 2013 2014 data For those who seek a more detailed explanation of how all norms were calculated a detailed explanation is included in a technical report along with the norm summary tables on pages 8 14 This document serves as an extension of the summary tables presented in that section
