signalling which tend to mitigate or reinforce each other depending on circumstances Finally the volume updates some popular models of systemic self destruction from autoimmunity and self organized criticality to imperial overstretch and discusses some prominent cases from supernova explosions to the civil war following the Russian Revolution of 1917 The interdisciplinary style of narration ensures the accessibility of the materials and theories presented for the specialists and students from different fields As such it will appeal to those interested in complexity studies from the areas of sociology history media and communication studies immunology computer science literary criticism cultural studies political science and international relations
