efficacy of exercise in major depression and at depressed episode of bipolar patients as well as some authors shows the benefits of exercise in some anxiety disorders like Generalized Anxiety Disorder and Panic Disorder. Despite their efficacy little is known concerning the main mechanisms related to the antidepressant and anxiolytic effects of exercise. Several studies in an animal model using Neurotrophic Factors, Oxidative Stress, Immunologic response and other biological markers reveal promising results. However, few studies were conducted in clinical samples. Additional to the antidepressant and anxiolytic effects, exercise appears to improve QoL in major depressed bipolar and anxiety patients. Theoretically, this increase may be associated with cognitive improvements, improvements at sleep quality, physical functioning as well as other psychological issues as self-esteem, self-concept and general well-being. The purpose of this topic is to address the novelty and most recent research related to antidepressant and anxiolytic effects of physical activity and exercise in patients with affective and anxiety disorders as well as the issues associated with QoL improvement. The topic is looking for Clinical trials using exercise and physical activity as a treatment for affective and anxiety disorders. Studies investigating the optimal prescription factors: dose, volume, intensity, setting, frequency associated with antidepressant and anxiolytic effects of physical activity and exercise for affective and anxiety disorder patients. Original studies, comprehensive reviews, hypothesis and opinions concerning the mechanisms of antidepressant and anxiolytic effects of physical activity and exercise in affective and anxiety disorder patients.
