

THE LORAX and SUSTAINABLE DEVELOPMENT

Developed by: Dr. John Ramsey, University of Houston

The focus of this activity is to introduce and understand the concept of sustainable development by using ideas found in The Lorax.

The Lorax is a fictional story about a man whose activities abused the environment and about what he learned from the experience. The story contains many common components found in the environmental problems and issues facing humans around the world. Further, The Lorax also contains many of the components associated with sustainable development (SD), an idea that is probably new to many of you.

Sustainable development is an important (and complicated) idea for all human beings to understand. SD is the current worldwide attempt by planners, leaders, and scientists to correct human activities in such a way that the environment is preserved. Although there is still much confusion and discussion, there appear to be four basic parts of SD - human needs, technology needs, economic needs, and environmental needs. Let's consider each of these.

"Human needs" refers to the basics of human life. The primary needs include income, shelter, food, water, safety, and health. Certainly, others might argue that educational and spiritual components should be included. And certainly there are differences between regions, nations, and continents. Individuals living in developed, industrialized countries have, for the most part, greater opportunities to meet basic needs than individuals living in developing or underdeveloped countries.

"Economic needs" refers to monetary systems used by human beings in their activities. With the exception of primitive tribes, few humans in today's world can themselves meet all their basic needs. Further, they specialize in a particular good and/or service provided by others. For example, bakers make bread; ranchers raise cattle; truckers transport bread, cattle and other goods. These goods and/or services that are needed by others are bartered (i.e. traded) or exchanged for money. Money is a symbol of the value humans place on goods and/or services. Then, the bakers, ranchers, and others buy other goods and/or services they need. Thus, over time the exchange of goods and services has changed into complicated economic systems, the discussion of which is far beyond the scope of The Lorax. The important idea is that in today's world, individuals and nations operate within a complicated system based on the exchange of money for resources, goods, knowledge, and/or services. Further, most individuals (and nations) work to improve their economic status...improving their incomes in order that more goods and/or services can be bought.
