The diagram illustrates a three-pronged approach to future land use planning. It begins with a central goal, 'Future Land Use Planning', which branches into three main categories: Geological, Topographical, and Geophysical. Each category is supported by specific data collection and analysis methods. Geological involves field surveys, cross-sections, and subsurface logs. Topographical involves 2D and 3D mapping. Geophysical involves seismic refraction, GPR, and resistivity surveys. All three streams of data feed into a central diagnostic phase, 'Environment and Subsurface Diagnosis'. This diagnosis then informs 'Optimal Land Use Planning', which ultimately leads to 'Sustainability'.
