Nature is the influence of genetics or hereditary factors in determining the individual's behavior. In other words, it is how natural factors shape the behavior or personality of an individual. In most cases, nature determines the physical characteristics which in effect influence the behavior of an individual. Physical characteristics such as physical appearance, type of voice and sex which are determined by hereditary factors influences the way people behave.

Nurture on the other is the upbringing of an individual according to the environmental conditions. That is, the way individuals are socialized. Basically, nurture is the influence of environmental factors on an individual's behavior.

According to this paradigm, an individual's behavior can be conditioned depending on the way one would like it to be. Often, individuals' behaviors are conditioned by the socio-cultural environmental factors. It is because of socio-cultural environmental conditions that the differences in the behavior of individuals occur.

Nature determines individual traits that are hereditary. In other words, human characteristics are determined by genetic predispositions which are largely natural. Hereditary traits are normally being passed from the parents to the offspring. They include characteristics that determine sex and physical make up. According to natural behaviorists, it is the genes that will determine the physical trait an individual will have. These are encoded on the individuals DNA.

Therefore, behavioral traits such as sexual orientation, aggression, personality and intelligence are also encoded in the DNA. However, scientists believe that these characteristics are evolutionary. That is, they change over time depending on the physical environment adaptability. Evolutionary scientists argue that changes in genes are as a result of mutations which are caused by environmental factors. Thus, natural environment determines individual characteristics which are genetically encoded in the DNA.

Conversely, individuals possess traits that are not naturally determined. These are characteristics that are learnt rather than being born with. These are traits which largely

Research Paper undergraduate from the year 2005 in the subject Speech Science Linguistics grade A University of London School of Languages Linguistics and Culture course Linguistic Analysis language English abstract Children all over the world seem to acquire their first language in much the same manner. The stages in their highly structured First Language Acquisition (FLA) process that involve making hypotheses and testing them against the linguistic input they are exposed to appear to be universal in all children. However, Chomsky's nativist theory of a Language Faculty that is innate in every healthy human being has been challenged vigorously especially by advocates of the behaviouristic school. Alas, there are certain arguments that strongly support the Innateness Hypothesis (IH) and the existence of a Language Faculty. 1 FLA is uniform 2 FLA is untutored 3 FLA is underdetermined by exposure data 4 FLA draws from degenerated input 5 FLA features no negative evidence 6 FLA is always successful. *Essays* Ramesh Gampat, 2022-01-06.
