**20.3.3** Describe the problems that faced the first conservation organizations. Give a representative example of how a conservation effort resulted in an ecological system similar to the state.

#### Managing and Restoring Ecosystems

**20.4.1** Describe the goals of landscape ecology and wetlands.

**20.4.2** Describe the importance of edges and corridors in relation to biodiversity.

**20.4.3** Explain how ecosystem ecology, including geomorphology and hydrogeology of wetlands, provides a tool to assess physical conditions to plan natural ecological plans.

**20.4.4** Explain why sustainable development is the ultimate goal for the long-term sustainability of human welfare and the resources that support them.

**Conservation:** Saving the Species

**20.1.1** Explain the human conservation of habitat and conservation efforts.

1. The first time a conservation project (population) in the early 1970s they were clearly shown to be important to humans.
2. Conservation efforts brought the population of the species up to about 10% in the early 1970s. Since a lot of time (the 1970s) they have been protected to maintain the population and the 10%.
3. Conservation efforts have been the result of a conservation project. Since the increase in the human population of the Florida Keys and the conservation efforts of habitat, the human population is again increasing. The conservation project of habitat has been the result of the human population of the Florida Keys.
4. Conservation of the population is now. Conservation of the conservation of the Florida Keys (the Florida Keys) is the result of the conservation of the population.
5. There are currently many conservation projects along the Florida Keys. Since the conservation of the Florida Keys is the result of the conservation of the population, the conservation of the population is the result of the conservation of the population.

**20.1.2** The goal of the key is to show the biodiversity of the Florida Keys and the conservation of the Florida Keys.
