*Processed Meats* A.M. Pearson, T.A. Gillett, 2012-12-06 Processed Meats Third Edition reflects the changes taking place in the meat processing industry. This updated edition provides a comprehensive introduction to the principles and practices involved in processing meat and poultry into consumer products. The volume covers a range of topics from the economics of processing to the industry's recent trends and new developments, including new chapters on spices and low fat processed meat. This current edition includes the composition and nutritive value of raw materials and processed meats, various curing agents, methods of curing, smoking, and industry adaptations influenced by consumer demands for convenience and healthy products. While the majority of this work addresses various meat products such as sausages, canned meat, sectioned and formed meats, cured and smoked products, and restructured meat products, the volume also discusses operations and formulations. Processed Meats Third Edition is a unique and valuable text for undergraduate students. In addition, professionals in the meat and poultry industries will benefit from the current information found in this new single source guide.

**Handbook on Fruits, Vegetables & Food Processing with Canning & Preservation (3rd Edition)** NPCS Board, 2012-02-09 Natural foods such as fruits and vegetables are among the most important foods of mankind as they are not only nutritive but are also indispensable for the maintenance of health. India is the second largest producer of fruits and vegetables in the world. Fertile soils, a dry climate, clean water, and abundant sunlight help the hard working farmers to produce a bountiful harvest. Although there are many similarities between fruits and vegetables, there is one important difference that affects the way that these two types of crop are processed: like fruits are more acidic than vegetables. Food processing is the set of methods and techniques used to transform raw ingredients into food or to transform food into other forms for consumption. Food processing typically takes clean harvested crops or butchered animal products and uses these to produce attractive, marketable, and often long shelf life food products. Canning is a method of preserving food in which the food is processed and sealed in an airtight container. Food preservation is the process of treating and handling food to stop or greatly slow down spoilage, loss of quality, edibility, or nutritive value caused or accelerated by microorganisms. One of the oldest methods of food preservation is by drying, which reduces water activity sufficiently to prevent or delay bacterial growth. Drying also reduces weight, making food more portable. Freezing is also one of the most commonly used processes, commercially and domestically, for preserving a very wide range of food, including prepared food stuffs which would not have required freezing in their unprepared state. Fruits and vegetable processing in India is almost equally divided between the organized and unorganized sector, with the organized sector holding 48% of the share. The present book covers the processing techniques of various types of fruits, vegetables, and other food products. This book also contains photographs of equipments and machineries used in fruits, vegetables, and food processing, along with canning and preservation. This book is an invaluable resource for new entrepreneurs, food technologists, industrialists, etc.
