Blow-up for Higher-Order Parabolic, Hyperbolic, Dispersion and Schrodinger Equations Victor A. Galaktionov, Enzo L. Mitidieri, Stanislav I. Pohozaev, 2014-09-22 Blow up for Higher Order Parabolic Hyperbolic Dispersion and Schrodinger Equations shows how four types of higher order nonlinear evolution partial differential equations PDEs have many commonalities through their special quasilinear degenerate representations. The authors present a unified approach to deal with these quasilinear PDEs. The book **Wandering in the World of Smarandache Numbers** A. A. K. Majumdar, 2010. This book covers only a part of the wide and diverse field of the Smarandache Notions and contains some of the materials that I gathered as I wandered in the world of Smarandache. Most of the materials are already published in different journals but some materials are new and appear for the first time in this book. All the results are provided with proofs. Chapter 1 gives eleven recursive type Smarandache sequences namely the Smarandache Odd Even Prime Product Square Product of two types Higher Power Product of two types Permutation Circular Reverse Symmetric and Pierced Chain sequences. Chapter 2 deals with the Smarandache Cyclic Arithmetic Determinant and Bisymmetric Arithmetic Determinant sequences and series involving the terms of the Smarandache bisymmetric determinant natural and bisymmetric arithmetic determinant sequences. Chapter 3 treats the Smarandache function $S(n)$. Chapter 4 considers in rather more detail the pseudo Smarandache function $Z(n)$. And the Smarandache S related and Z related triangles are the subject matter of Chapter 5. To make the book self contained some well known results of the classical Number Theory are given in Chapter 0. In order to make the book up to date the major results of other researchers are also included in the book. At the end of each chapter several open problems are given.

Image and Text Compression James A. Storer, 2012-12-06 James A. Storer Computer Science Dept, Brandeis University, Waltham, MA 02254 Data compression is the

process of encoding a body of data to reduce storage requirements. With lossless compression data can be decompressed to be identical to the original whereas with lossy compression decompressed data may be an acceptable approximation according to some fidelity criterion to the original. For example with digitized video it may only be necessary that the decompressed video look as good as the original to the human eye. The two primary functions of data compression are storage. The capacity of a storage device can be effectively increased with data compression software or hardware that compresses a body of data on its way to the storage device and decompress it when it is retrieved. Communications. The bandwidth of a digital communication link can be effectively increased by compressing data at the sending end and decompressing data at the receiving end. Here it can be crucial that compression and decompression can be performed in real time.
