

Friction

Force of Friction

- Friction is the force which develops at the surfaces of contact of two bodies and opposes their relative motion.

- It always acts in the direction opposite to the applied force.

Factors Affecting Friction

The factors which affect friction are

- The nature of the two surfaces in contact.
- The force with which the two surfaces are pressed together.
- A rough surface produces greater friction as compared to a smooth surface.
- It is caused by irregularities on the surfaces of the objects in contact.

- We are more likely to slip while walking on a wet floor, because the wet floor is slippery and produces less friction.
- The force of friction increases if the surfaces are pressed harder.

- A heavier object exerts a greater frictional force as it presses the floor harder.
