Advanced Topics on Cellular Self-organizing Nets and Chaotic Nonlinear Dynamics to Model and Control Complex Systems Riccardo Caponetto, 2008 This book focuses on the research topics investigated during the three year research project funded by the Italian Ministero dell Istruzione dell Universite e della Ricerca MIUR Ministry of Education University and Research under the FIRB project RBNE01CW3M With the aim of introducing newer perspectives of the research on complexity the final results of the project are presented after a general introduction to the subject The book is intended to provide researchers PhD students and people involved in research projects in companies with the basic fundamentals of complex systems and the advanced project results recently obtained

Computational Modeling of Multilevel Organisational Learning and Its Control Using Self-modeling Network Models Gülay Canbaloglu, Jan Treur, Anna Wiewiora, 2023-06-16 Although there is much literature on organisational learning mathematical formalisation and computational simulation there is no literature that uses mathematical modelling and simulation to represent and explore different facets of multilevel learning This book provides an overview of recent work on mathematical formalisation and computational simulation of multilevel organisational learning by

exploiting the possibilities of self modeling network models to address it This is the first book addressing mathematical formalisation and computational modeling of multilevel organisational learning in a systematic principled manner A self modeling network modeling approach from AI and Network Science is used where in a reflective manner some of the network nodes called self model nodes represent parts of the network s own network structure characteristics This is supported by a dedicated software environment allowing to design and implement higher order adaptive network models by specifying them in a conceptual manner at a high level of abstraction in a standard table format without any need of algorithmic specification or programming This modeling approach allows to model the development of knowledge in an organisational setting in a neatly structured manner at three different levels for the usage adaptation and control respectively of the underlying mental models Several examples of realistic cases of multilevel organisational learning are used to illustrate the approach Crucial concepts such as the aggregation of mental models to form shared mental models out of individual mental models are addressed extensively It is shown how to model context sensitive control of organisational learning taking into account a wide variety of context factors for example relating to levels of expertise of individuals or to leadership styles of managers involved Mathematical equilibrium analysis of models of organisational learning is also addressed among others allowing verification of correctness of the implemental models in comparison to their conceptual design Chapters in this book also contribute to the Management and Business Sciences research by demonstrating how computational modeling can be used to capture complex management phenomena such as multilevel organizational learning This book has a potential implication for practice by demonstrating how computational modeling can be used to capture learning scenarios which then provide a basis for more informed managerial decisions *Simulation-Driven Design Optimization and Modeling for Microwave Engineering* Slawomir Koziel, 2013 On the other hand various interactions between microwave devices and their environment such as feeding structures and housing must be taken into account and this is only possible through full wave EM analysis Electromagnetic simulations can be highly accurate but they tend to be computationally expensive Therefore practical design optimization methods have to be computationally efficient so that the number of CPU intensive high fidelity EM simulations is reduced as much as possible during the design process For the same reasons techniques for creating fast yet accurate models of microwave structures become crucially important In this edited book the authors strive to review the state of the art simulation driven microwave design optimization and modeling A group of international experts specialized in various aspects of microwave computer aided design summarize and review a wide range of the latest developments and real world applications **Intelligent Robotics and Applications** Takayuki Matsuno, Honghai Liu, Lianqing Liu, Zhouping Yin, Xiangyang Zhu, Weihong Ren, Zhiyong Wang, Yixuan Sheng, 2025-10-24 The 3 volume set LNAI 16074 16076 constitutes the proceedings of the 18th International Conference on Intelligent Robotics and Applications ICIRA 2025 which took place in Okayama Japan during August 6 9 2025 The 165 full papers included in these

proceedings were carefully reviewed and selected from 329 submissions. They were organized in topical sections as follows:

Part 1 Robotic Dexterous Manipulation and Intelligent Control Intelligent Perception and Control Technologies for Marine Robotic Systems Intelligent Technology in Neural Decoding Modulation and Interfacing Wearable Robots for Assistance Augmentation and Rehabilitation of Human Movements Soft Robotics
