The screenshot shows the Microsoft Visual Basic for Applications (VBA) Editor interface. On the left, a worksheet is visible with column A containing the numbers 1 through 10. The VBA editor window has a toolbar at the top with various icons, and a menu bar below it. The menu bar is highlighted with a yellow box, and the 'Run' option is selected, with a red box around the green play button icon. The title bar of the editor window says 'Article 26\_VBA Examples.xlsx - Module3 (Code)'. The code in the editor is as follows:

```
Sub Insert_Numbers_From_Top()
    Dim i As Integer
    For i = 1 To 10
        Cells(i, 1).Value = i
    Next i
End Sub
```

A red arrow points from the number 1 in cell A1 on the worksheet to the first line of code 'Sub Insert\_Numbers\_From\_Top()'. A yellow box highlights the loop structure 'For i = 1 To 10' and the assignment 'Cells(i, 1).Value = i'. The 'Next i' and 'End Sub' lines are also visible. To the right of the editor, a 'Microsoft Excel' message box is displayed, showing the number '1' and an 'OK' button. The message box has a blue border and a light gray background.

Advanced Excel for Scientific Data Analysis Robert De Levie,2008 Combining an easy going style with an emphasis on practical applications this greatly expanded second edition is remarkable in scope and coverage As reviews of the first edition noted the term advanced in the title is not used lightly Less than a third of its 700 pages are devoted to least squares analysis yet the reader will learn about many aspects of this ubiquitous method that are seldom found together in one volume multivariate and polynomial centering the statistical uncertainty in uncertainty estimates how to use the covariance singular value decomposition the pros and cons of weighted least squares moving equidistant least squares nonlinear least squares and imprecision contours There are lucid chapters on Fourier transformation convolution and deconvolution and digital simulation of ordinary differential equations A new chapter is devoted to some common but often only crudely used mathematical methods such as numerical differentiation Romberg integration and cubic spline interpolation Another new chapter shows how to use linear algebra on the spreadsheet with Volpi's extensive matrix toolbox of custom functions and macros A third newly added chapter describes how to set up the spreadsheet to make it less error prone and how to get

superaccurate answers in Excel. The substantially enlarged chapter on writing functions and macros now has a set of MacroMorsels to illustrate specific points that otherwise might trip up novice programmers and a detailed description of Excel's extensive debugging tools. All this is presented in an easily digestible format illustrated with many examples from the literature and supported by a large collection of open access i.e. fully transparent and user modifiable custom functions and macros.
