These advances either represent or are enabling paradigm shifts in the discipline and are influencing how we observe, derive and test hypotheses and intervene. Progress in information technology is allowing the collection of scattered, fragmented data and the discovery of hidden meanings from stored data and the impacts on psychiatry are fully explored. Detailed attention is also paid to the applications of artificial intelligence, machine learning and data science technology in psychiatry and to their role in the development of new hypotheses which in turn promise to lead to new discoveries and treatments. Emerging research methods for precision medicine are discussed as are a variety of novel theoretical frameworks for research such as theoretical psychiatry, the developmental approach to the definition of psychopathology and the theory of constructed emotion. The concluding section considers novel interventions and treatment avenues including psychobiotics, the use of neuromodulation to augment cognitive control of emotion and the role of the telomere/telomerase system in psychopharmacological interventions. [Positive or Negative? The Effect of Emerging Technologies and Products on Mental Health](#) Chao Guo, Stuart Gilmour, Peige Song, Aiping Fang, 2023-11-02 Emerging technologies and products such as digital health technology, computing platforms, wearable devices, smartphone sensors and electronic gadgets have the potential to transform and empower society while simultaneously presenting unprecedented challenges in our life. Some like electronic cigarettes/e-cigarettes are for entertainment, some like online conference platforms are for convenience and some like social media have become a life necessity. However, there is an ongoing debate about whether the use of physical and virtual digital technology products can do harm to mental health. Some evidence-based research shows that frequent use of social media

may cause depression and anxiety and derived behavioral phenomena like cyberbullying and game addiction which negatively affect people's lives. Other scholars think digital technology products could provide insights into timely personalized engaging and accessible intervention promotion and improvement of mental health. Given the ubiquity of digital devices and their complex and subtle associations with mental health more research is needed to bring benefits to both research and daily life practices.

**Public Mental Health in Trauma and War** Gülseren Keskin, Mahire olcay Çam, Man Cheung Chung, 2025-02-06 People living in war zones are exposed to numerous stressors including physical harm, psychological trauma, loss, deprivation, bereavement, or abuse. In recent years there has been growing acceptance that war related stressors have the potential to pose a risk to health. Epidemiological studies also reveal the health consequences associated with war and trauma and agree that post traumatic stress disorder and depression are common in war affected populations. Since the turn of the last century there have also been changes in the conception of war. Nowadays wars have evolved into a new form that can affect larger masses instead of hand to hand combat with cannons and rifles. War is an artificial disaster and differs from the kind of natural pandemic disaster that affects the whole world. Countless deaths, forced abandonment of homes, families, friends, and property, and severe anxiety about war are experienced because of the war related conditions for millions of humans.
