2.5 Membrane Permeability

What Can Cross the Membrane?

Types of molecules that cross the membrane:

- Small nonpolar molecules** (like O_2 , CO_2 , and lipids) can diffuse through the phospholipid bilayer without any help. These molecules are small and nonpolar.
- Small polar uncharged molecules** (like water) can diffuse through the membrane in small amounts. Water molecules are very small and can slip between phospholipids, but the membrane is not very permeable to other small polar molecules.
- Large polar molecules and ions** (like glucose, amino acids, Na^+ , K^+ , and Cl^-) cannot cross the membrane on their own. They need transport proteins to help them cross. These molecules and ions typically cross through transport proteins in the membrane.

The hydrophobic core of the membrane is the main barrier to the movement of most molecules. This is why small nonpolar molecules can cross the membrane more easily than large polar molecules.

How Different Molecules Cross the Membrane

Molecule Type	Examples	Can Cross Easily?	Needs Transport Protein?
Small nonpolar	O_2 , CO_2 , CH_4	Yes	No
Small polar uncharged	Water	Yes (limited)	No (limited)
Large polar	Glucose, amino acids	No	Yes
Ions	Na^+ , K^+ , Cl^-	No	Yes

1.5 Representing a Quantitative Variable with Graphs

Remember that a **quantitative variable** (or **quantitative variable**) refers to variables that can be measured and are numerical values. Quantitative variables can be discrete or continuous.

- A **discrete variable** can take on a limited number of values. The number of children in a family is a discrete variable. Examples of discrete variables include the number of children in a family, the number of votes in an election, and the number of cars in a parking lot.
- A **continuous variable** can take on an infinite number of values. Height, weight, and time are continuous variables. Examples of continuous variables include the height of a person, the weight of a person, and the time it takes to run a mile.

This page will describe how to represent and display quantitative data. The following table is a summary of the different types of graphs that can be used to represent quantitative data.

2.12 Legacies of the Haitian Revolution

The Haitian Revolution represented a major turning point in the history of the Americas. It was the first successful revolution by a people of color against a European colonial power. The revolution inspired other peoples of color to fight for their own freedom and led to the end of slavery in the Americas.

3.5 The American Revolution

Causes of the American Revolution

In response to the British, the American people began to demand more rights and freedoms, including:

- Representation in the British government
- End to the British monopoly on trade with the colonies
- End to the British monopoly on trade with the colonies
- The right to trade with other nations
- The right to trade with other nations

The Boston Massacre

The Boston Massacre was a deadly incident that took place in the city of Boston in 1770. It was the result of the British government's attempt to maintain its control over the colonies.

A group of British soldiers were standing guard in front of the Custom House in Boston. A group of American people were gathered in front of the Custom House, and they began to throw stones and other objects at the soldiers.

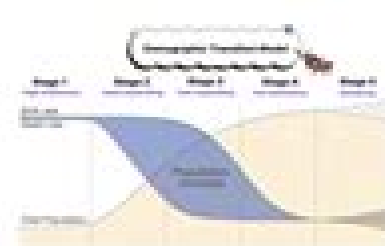

The soldiers were ordered to fire, and they did. Five people were killed, and many more were injured. This event was a major turning point in the American Revolution.

2.5 The Demographic Transition Model

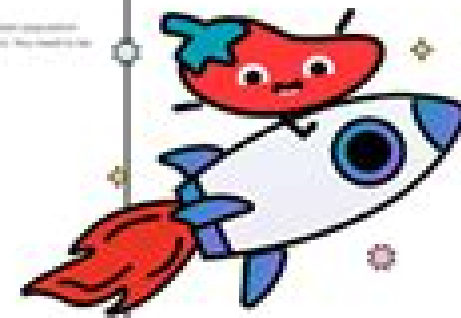

Demographic Transition Model

The **Demographic Transition Model** (DTM) is a model that describes the changes in a country's population over time. It is based on the idea that a country's population will grow rapidly in the early stages of development and then slow down as the country becomes more developed.

Stage 1

Stage 1 is the **high birth rate and high death rate** stage. Because of this, the natural increase rate is close to zero. The population grows slowly because the birth rate and death rate are both high and the population remains the same. The birth rate and the death rate are both high because of high infant mortality and a lack of medical care.
