Scientific Computing and Algorithms in Industrial Simulations

Michael Griebel, Anton Schüller, Marc Alexander Schweitzer, 2017-10-30 The contributions gathered here provide an overview of current research projects and selected software products of the Fraunhofer Institute for Algorithms and Scientific Computing SCAI They show the wide range of challenges that scientific computing currently faces the solutions it offers and its important role in developing applications for industry Given the exciting field of applied collaborative research and development it discusses the book will appeal to scientists practitioners and students alike The Fraunhofer Institute for Algorithms and Scientific Computing SCAI combines excellent research and application oriented development to provide added value for our partners SCAI develops numerical techniques parallel algorithms and specialized software tools to

support and optimize industrial simulations Moreover it implements custom software solutions for production and logistics and offers calculations on high performance computers Its services and products are based on state of the art methods from applied mathematics and information technology Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment Umer Afzal,2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts

Discrete Element Method for Multiphase Flows with Biogenic Particles Ling Zhou,Mahmoud A. Elemam,Ramesh K. Agarwal,Weidong Shi,2024-09-24 This book presents the advanced theory and application of the combined Computational Fluid Dynamics Discrete Element Method CFD DEM to multiphase flow simulations of the gas and bio particulate matter of non uniformly shaped biomass It explores how DEM can simulate the complex behaviour of biomass particles such as their packing in the multiphase flows that occurs in the agricultural product processing industries It offers an overview of aerodynamic systems such as cyclone separators used in the agricultural processing industry A detailed description of DEM modeling including the particle particle particle boundary and particle fluid interactions in the context of biomass particles of varying sizes and shapes is provided Coverage includes the critical application of CFD DEM simulation technology in designing and optimizing grain handling and processing equipment and the application of extended DEM to other granular flows of complex particles like sand powders and dust from mines where clumping and agglomeration occur The application of DEM in modeling and simulation of complex multiphase systems can help improve productivity reduce costs and increase efficiency in the agricultural industry

A New Hypothesis on the Anisotropic Reynolds Stress Tensor for Turbulent Flows László Könözy,2020-12-01 This self contained interdisciplinary book encompasses mathematics physics computer programming analytical solutions and numerical modelling industrial computational fluid dynamics CFD academic benchmark problems and engineering

applications in conjunction with the research field of anisotropic turbulence It focuses on theoretical approaches computational examples and numerical simulations to demonstrate the strength of a new hypothesis and anisotropic turbulence modelling approach for academic benchmark problems and industrially relevant engineering applications This book contains MATLAB codes and C programming language based User Defined Function UDF codes which can be compiled in the ANSYS FLUENT environment The computer codes help to understand and use efficiently a new concept which can also be implemented in any other software packages The simulation results are compared to classical analytical solutions and experimental data taken from the literature A particular attention is paid to how to obtain accurate results within a reasonable computational time for wide range of benchmark problems The provided examples and programming techniques help graduate and postgraduate students engineers and researchers to further develop their technical skills and knowledge
