

NAME: \_\_\_\_\_

## AP Biology TEST #5 - Chapters 11-14, 16 - REVIEW SHEET

- Griffith's experiments showing the transformation of R strain pneumococcus bacteria to S strain pneumococcus bacteria in the presence of heat-killed S strain bacteria gave evidence that
  - an external factor was affecting the R strain bacteria.
  - DNA was definitely the transforming factor.
  - S strain bacteria could be reactivated after heat killing.
  - All of the above
- Experiments by Avery, MacLeod, and McCarty supported DNA as the genetic material by showing that
  - both protein and DNA samples provided the transforming factor.
  - DNA was not complex enough to be the genetic material.
  - only samples with DNA provided transforming activity.
  - even though DNA was molecularly simple, it provided adequate variation to act as the genetic material.
- Hershey and Chase used radioactive  $^{35}\text{S}$  and  $^{32}\text{P}$  in experiments to provide evidence that DNA was the genetic material. These experiments pointed to DNA because
  - progeny viruses retained  $^{32}\text{P}$  but not  $^{35}\text{S}$ .
  - presence of  $^{32}\text{P}$  in progeny viruses indicated that DNA was passed on.
  - absence of  $^{35}\text{S}$  in progeny viruses indicated that proteins were not passed on.
  - All of the above
- Chargaff observed that the amount of
  - purines is roughly equal to the amount of pyrimidines in all tested organisms.
  - A is roughly equal to the amount of T in all tested organisms.
  - A + T is roughly equal to the amount of G + C in all tested organisms.
  - Both a and b
- Watson and Crick's model allowed them to visualize
  - the molecular bonds of DNA.
  - how the purines and pyrimidines fit together in a double helix.
  - that the two strands of the DNA double helix were antiparallel.
  - All of the above
- A fundamental requirement for the function of genetic material is that it must be
  - conserved among all organisms with very little variation.
  - passed intact from one species to the next species.
  - accurately replicated.
  - found outside the nucleus.
