

Cell Division: Mitosis in Onion Root Tips

Background Information

One of the characteristics of living things is the ability to replicate and pass on genetic information (DNA) to the next generation. In our last unit, you learned how DNA replicates or make copies of itself forming replicated chromosomes. In mitosis, these replicated chromosomes are separated into two *genetically identical nuclei*. In most cases, mitosis is followed by *cytokinesis*, when the cytoplasm divides and organelles separate into two new daughter cells. This type of cell division is important for *growth, renewal, and repair* of the cells that make up multicellular organisms.
