Bowie,1986 **Automated decision-making in the public sector. Artificial Intelligence vs Administrative Intelligence?** Hortense Fricker,2021-01-12 Master s Thesis from the year 2020 in the subject Organisation and administration Public administration grade 1 1 Free University of Berlin Otto Suhr Institut language English abstract The paper is divided in two main parts The first part introduces the agency theory and its application to two relevant aspects the agency theory in the public sector and the agency theory involving artificial agents The second part aims at providing answers to the research questions by discussing the changes in the agency of the public administrations as well as the

changes in the control methods used to monitor these administrations Finally the conclusion summarizes the answer to the research questions exposes the implications and limits of this paper and offers leads for possible future research on this topic Automated decision making ADM a type of algorithm which supports decision making and combines advanced analytics and data minig to make predictions has been developed in various public sector fields from predictive policing to healthcare and is increasingly helping public agents by delivering analysis that they can leverage to make their decisions This technique involves three main stakeholders the programmer of the algorithmic system the user who is the public agent operating the ADM system and the individuals affected by the decisions made using ADM This paper focuses on the consequences on the governance and responsibility of administrations increasingly relying on algorithms to make their decisions Does the introduction of ADM in public administrations transform their agency If so why does this change occur and how does it impact the control methods required to supervise the actions of administrations The chosen approach is the agency theory which is suited to deal with delegation specifically between actors from different contextual backgrounds France has been chosen as the case study for this topic as it has put in place relevant laws and public institutions in order to deal with public ADM The method chosen to investigate this issue is based on a literature review as it is appropriate to approach a case study This includes scientific papers for the technical aspects from computer sciences to social and political sciences as well as reports from governments international institutions and private companies More general literature such as articles and blog posts are used for information on the use of ADM in France and the public debate surrounding it Finally the methodology also includes semi structured interviews led with experts working on the topic of ADM in the public sector **The Development of an Artificial Intelligence System for Inventory Management Using Multiple Experts** Mary Kathryn Allen,1986 The primary objective of this thesis was to discover the expert decision heuristics for a limited inventory management task A second objective was to incorporate these heuristics into an expert system and measure the performance level of this expert system both in terms of the effectiveness and the efficiency of the decision which resulted A fourteen step approach to the development and testing of expert systems which incorporates many of the lessons learned from past developmental efforts was used The approach included the use of the Delphi Technique for task and expert selection the use of multiple experts as a group and use of the Nominal Group Technique to achieve consensus Seven experts worked as a group with the researcher to determine the decision heuristics The expert system which was developed the Inventory Management Assistant IMA contained 441 rules and recommended advice to the user on ten separate elements The expert system was then tested to determine the effect of the expert system on decision effectiveness and efficiency Inventory managers who were assisted by the expert system exhibited significant performance improvements on a complex problem
