C# Interview Questions and Answers - English Navneet Singh, Here are some common C interview questions along with their answers What is C C is a modern object oriented programming language developed by Microsoft as part of the NET framework It is designed for building a variety of applications that run on the NET platform What are the features of C C supports features such as object oriented programming classes inheritance polymorphism type safety garbage collection properties events delegates and more It also has support for asynchronous programming LINQ Language Integrated Query and dynamic typing What is the difference between value types and reference types in C Value types store their data directly whereas reference types store a reference to the data Value types are stored on the stack and their memory allocation is

handled automatically by the system Examples include primitive types like int float and struct Reference types on the other hand are stored on the heap and their memory allocation must be managed manually using constructors and destructors Examples include classes interfaces arrays and strings What is boxing and unboxing in C Boxing is the process of converting a value type to a reference type and unboxing is the reverse process of converting a reference type back to a value type This conversion is necessary when storing value types in collections that require reference types such as ArrayList but it can introduce performance overhead due to memory allocation and type conversion What is the difference between ref and out keywords in C Both ref and out are used for passing arguments by reference rather than by value However the out parameter does not require the variable to be initialized before it is passed to the method whereas the ref parameter requires the variable to be initialized before being passed to the method Additionally the out parameter must be assigned a value inside the method before it returns What is the purpose of the using statement in C The using statement is used to ensure that a resource is properly disposed of when it is no longer needed It automatically calls the Dispose method of an object when it goes out of scope which is particularly useful for objects that implement the IDisposable interface such as file streams database connections and network streams What is the difference between an interface and an abstract class in C An interface defines a contract that classes can implement specifying only the method signatures without any implementation An abstract class on the other hand can contain both method declarations and implementations but it cannot be instantiated directly Classes can inherit from only one abstract class but they can implement multiple interfaces What is the purpose of the async and await keywords in C The async and await keywords are used for asynchronous programming in C async is used to define asynchronous methods and await is used to asynchronously wait for the result of an asynchronous operation without blocking the calling thread This allows for more responsive and scalable applications particularly in I O bound scenarios These are just a few examples but there s a wide range of topics that might come up in a C interview . **NET**
