Some Nonlinear Problems in Riemannian Geometry Thierry Aubin, 2013-03-09 During the last few years the field of nonlinear problems has undergone great development This book consisting of the updated Grundlehren volume 252 by the author and of a newly written part deals with some important geometric problems that are of interest to many mathematicians and scientists but have only recently been partially solved Each problem is explained up to date results are given and proofs are presented Thus the reader is given access for each specific problem to its present status of solution as well as to the most up to date methods for approaching it The main objective of the book is to explain some methods and new techniques and to apply them It deals with such important subjects as variational methods the continuity method parabolic equations on fiber

Nonlinear Analysis on Manifolds. Monge-Ampère Equations Thierry Aubin, 2012-12-06 This volume is intended to allow mathematicians and physicists especially analysts to learn about nonlinear problems which arise in Riemannian Geometry Analysis on Riemannian manifolds is a field currently undergoing great development More and more analysis proves to be a very powerful means for solving geometrical problems Conversely geometry may help us to solve certain problems in analysis There are several reasons why the topic is difficult and interesting It is very large and almost unexplored On the other hand geometric problems often lead to limiting cases of known problems in analysis sometimes there is even more than one approach and the already existing theoretical studies are inadequate to solve them Each problem has its own particular difficulties Nevertheless there exist some standard methods which are useful and which we must know to apply them One should not forget that our problems are motivated by geometry and that a geometrical argument may simplify the problem under investigation Examples of this kind are still too rare This work is neither a systematic study of a mathematical field nor the presentation of a lot of theoretical knowledge On the contrary I do my best to limit the text to the essential knowledge I define as few concepts as possible and give only basic theorems which are useful for our topic But I hope that the reader will find this sufficient to solve other geometrical problems by analysis
