

Sheep Heart Dissection

Sheep Heart Dissection

Objectives: Students, and all learners (including humans), have a four-chambered heart. Sheep hearts are much smaller than human hearts, but have the same external and internal structures. In this lab, you will explore a sheep heart to develop your understanding of the anatomy and physiology of the human heart. At the beginning of class, ask the partner to be your "dissector" and the other partner will be the "recorder". This recorder will read each step aloud. You are responsible for knowing the anatomy and physiology of every heart structure on this lab.

IMPORTANT: Follow the lab directions & should structure. Be sure to find it on the actual heart!

Lab Guidelines

- Wear safety gloves and goggles during the dissection and cleaning.
- Use food or drink in the lab during dissection.
- Be careful when using the knife. You will be using a scalpel today, which is sharp enough to cause significant wounds if handled inappropriately. When you are not using the scalpel, hold the blade up and in a safe point.
- When you finish the lab, spray and wipe down your table cloth, lab peripherals, and tools with a disinfectant solution.
- After you have cleaned up, shower at your house and wash your hands thoroughly with soap and water.

Part 1: External Anatomy

- Obtain a sheep heart from your instructor. If you are required to retrieve the heart from packaging, make sure you cut it open over a dissection tray or trash can, so the contents can be safely preserved. Do not cut from the packaging, and the heart. Once out of the packaging, place the heart upside down over the sink or into a large, flat, open container. Once you have drained the fluid, place the sheep heart in your dissection tray.

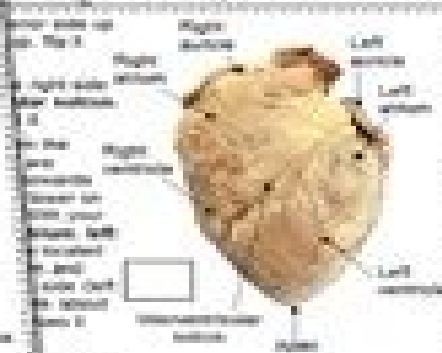

- The heart has a superior (upper) and inferior (lower) portion. The superior portion is wider and rounded, the large blood vessels that deliver blood to and from the heart. The inferior portion of the heart is called the base. The anterior portion of the heart comes to a point, known as the apex. You can think of the heart as an upside-down mountain. (The apex is on the bottom; base is at the top). Agree with your partner on which end of the heart is the apex and which end is the base prior to moving forward.

Part 2: Internal Anatomy

- Beef before cutting:** To view the internal anatomy, you will need a scalpel. You will be cutting the sheep heart along a frontal plane. In other words, you will be separating the front of the heart from the back of the heart. To make sure you are familiar with the front and back of the sheep heart, locate the front and back sides of the heart. (You will NOT completely cut the heart in half today. Rather, keep the front and back sides of the heart attached at the base.)

A. Cutting Tips:
