Facey,Brian W. Bowen,Bruce B. Collette, Gene S. Helfman,2022-10-14 THE DIVERSITY OF FISHES The third edition of The Diversity of Fishes is a major revision of the widely adopted ichthyology textbook incorporating the latest advances in the biology of fishes and covering taxonomy anatomy physiology biogeography ecology and behavior Key information on the evolution of various fishes is also presented providing expansive and conclusive coverage on all key topics pertaining to the field To aid in reader comprehension each chapter begins with a summary that provides a broad overview of the content of that chapter which may be particularly useful for those using the text for a course who don t intend to address every chapter in detail Detailed color photographs throughout the book demonstrate just some of the diversity and beauty of fishes that attract many to the field A companion website provides related videos selected by the authors instructor resources and additional references and websites for further reading Sample topics covered and learning resources included in The Diversity of Fishes are as follows How molecular genetics has transformed many aspects of ichthyology The close relationship between structure and function including adaptations to special environments Many physical and behavioral adaptations reflecting the fact that many fishes are both predators and prey Fish interactions with other species within fish assemblages and broader communities plus their impacts on ecosystems Global maps that more accurately represent the comparative sizes of oceans and land masses than maps used in prior editions For students instructors and individuals with an interest in ichthyology The Diversity of Fishes is an all in one introductory resource to the field presenting vast opportunities for learning many additional resources to aid in information retention and helpful recommendations on where to go to explore specific topics further      *The Visual System of Fish* Ron Douglas, Mustafa Djamgoz,2012-12-06 A question often asked of those of us who work in the seemingly esoteric field of fish vision is why To some of us the answer seems obvious how many other visual scientists get to dive in a tropical lagoon in the name of science and then are able to eat their subjects for dinner However there are better or at least scientifically more acceptable reasons for working on the visual system of fish First in terms of numbers fish are by far the most important of all vertebrate classes probably accounting for over half c 22 000 species of all recognized vertebrate species Nelson 1984 Furthermore many of these are of commercial importance Secondly if one of the research aims is to understand the human visual system animals such as fish can tell us a great deal since in many ways their visual systems and specifically their eyes are similar to our own This is fortunate since there are several techniques such as intracellular retinal recording which are vital to our understanding of the visual process that cannot be performed routinely on primates The cold blooded fish on the other hand is an ideal subject for such studies and much of what we know about for example the fundamentals of information processing in the retina is based on work
