Loughlin, 2016-01-19 The past decade has been marked by the acceleration of our understanding of the molecular biology of cancer. Simultaneously there have been increasing exigencies to diagnose, treat and follow cancer patients more economically. Biomarkers represent the marriage of science and economics. Biomarkers offer the potential to increase the precision of diagnosis, prognosis and surveillance of urological malignancies. This issue presents the cutting edge advances of biomarker technology to urologic oncology. **Hypoxia and Cancer** Giovanni Melillo, 2013-11-09 The imbalance between rapidly proliferating tumor cells and inadequate and inefficient tumor vasculature leads to a decrease in oxygen levels, hypoxia and or anoxia in tumor tissues. Intra tumor hypoxia profoundly affects the biological behavior of cancer cells which become resistant to conventional therapies and acquire a more invasive and metastatic phenotype. Hypoxia is a hallmark of the malignant phenotype and a key feature of the tumor microenvironment. Hypoxia Inducible Factor 1 (HIF-1) is a master regulator of the transcriptional response to oxygen deprivation. HIF-1 triggers the expression of genes whose products induce angiogenesis, decrease oxygen consumption, switch metabolism to glycolysis, maintain a stem cell phenotype and select for more invasive and metastatic cells. Therapeutic approaches targeting HIF-1 directly or downstream mediators of its transcriptional activity are being developed. Intra tumor hypoxia is a topic that has been gaining scientific interest over the last few years for its wide involvement in many physiological and pathological processes. This volume will cover the latest research and translational aspects associated with intra tumor hypoxia along with opportunities for drug development offered by this unique feature of the tumor microenvironment. The ongoing efforts to translate our understanding of the biology underlying intra tumor hypoxia into viable therapeutic options face many challenges but this book will provide an opportunity for an in depth analysis of the fundamental mechanisms implicated in the adaptation to low oxygen levels and will scrutinize the potential for opportunities that are being pursued in both research and the drug development industry.
