**Wasted Potential** Jocelyn Boiteau, Prabhu Pingali, 2025-10-26 This open access book examines how food systems reforms can support efforts to achieve SDG 12 by reducing food loss and waste in support of sustainable safe and nutritious diets in countries at different points of structural transformation To achieve responsible production and consumption and support safe and nutritious diets sustainable food system transformations are needed Strategies to achieve this transformation focus on increasing production and supply of nutrient rich foods efficiently moving food along the value chain to make healthy foods accessible ensuring that quality diets are affordable and driving demand for healthy diets via informed food choice By 2030 the United Nations aims to halve food waste and reduce food loss as part of Sustainable Development Goal target 12.3 Preventing food loss and waste both in terms of food quantity and food quality aligns with strategies to promote sustainable diets for all The authors of this volume approach food loss and waste in three unique important ways First while previous literature on the topic has focused on loss at the retail and consumer stages this volume uses a food systems lens to examine food loss and waste across the entire range of actors and activities from production to consumption This enables an

examination of feedback loops between food loss and food security as shifts in food systems occur at different stages of structural transformation Second while examining food loss and waste globally the authors focus particularly on low and middle income countries In doing so they explore entry points for food loss and waste investment and intervention priorities to deliver healthy diets under different food system contexts This is in contrast with the existing literature which primarily uses cases from the U S and Europe to examine the phenomenon Third this book explores both the quantitative and qualitative dimensions of food loss and waste using the latest evidence of measurement and prevention across disciplines and across all stages of structural transformation Wasted Potential provides a rigorous and much needed systems perspective on food loss and waste expertly bridging the gaps between food security environmental sustainability and economic development Boiteau and Pingali offer a clear actionable roadmap for aligning food system transformation with global development goals Their comprehensive approach to tackling food loss and waste brings much needed coherence to a fragmented field and offers practical guidance for future action to policymakers researchers and development practitioners Jessica Fanzo Professor of Climate and Director of the Food for Humanity Initiative Columbia Climate School The support of the Tata Cornell Institute made this book possible [Interactions between Bioactive Food Ingredients and Intestinal Microbiota, volume II](#) Zheng Ruan,Xiaodong Xia ,Fengjie Sun,2024-09-27 This is Volume II of the Research Topic Interactions between Bioactive Food Ingredients and Intestinal Microbiota The previous edition can be found here Numerous microorganisms colonize the gastrointestinal tract playing critical roles concerning digestion and absorption of dietary nutrients and the regulation of important functions including host metabolism immunity and intestinal barrier function Increasing evidence suggests that food encompassing nutrients and polyphenols are strong drivers shaping the composition and function of the gut microbiota and mediate the host s physiological activities directly or indirectly However the mechanisms involved in the interactions between food nutrients prebiotics gut microbiota and host health have not been enlightened to a wide extent **Finally Full, Finally Slim** Lisa R.
