

4 FORM, SHAPE AND VOLUME

The use of geometric shapes is a common drawing technique that you can learn to use so that you draw more complex forms such as a body. It explores how you think slightly differently about what you are looking at, but once you get used to it, it can make drawing easier. Simple shapes such as circles, ovals, ovals, boxes, rectangles and squares and other shapes are used to construct the rough shapes of a body and then refined into increasingly accurate shapes. The use of lines as well as shapes is used to identify a line of bilateral symmetry and the breaking of a complex form into simpler sections makes it possible to maintain as close a resemblance as possible to what you observe.

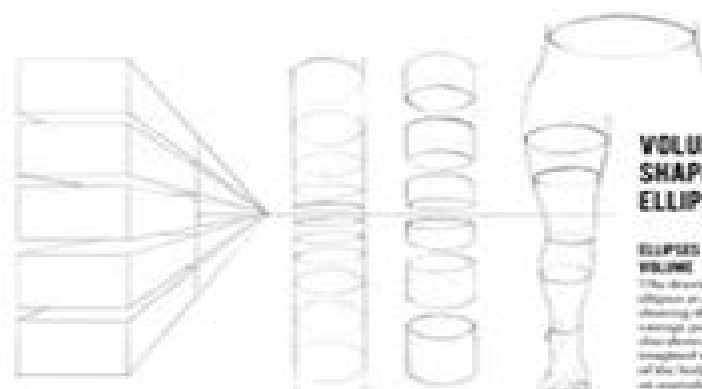

ELLIPSES

An ellipse is a circle-like geometric shape. It is like a circular shape in perspective – that is, angle – the circle becomes an ellipse. Depending on the viewing point of the viewer, the ellipse will look more or less circular. Drawing an ellipse accurately can really help with drawing the human body and many other things as well.

The above examples on this page show how an ellipse works in a few scenarios. If we take the circular form above, you can imagine that all you can see is a circle. If you are looking at it from a slightly different angle, it will resemble a rectangle. Many objects are either circular or have a circular aspect to their structure, for example a bowl. This is why they are used quite frequently to demonstrate the technique.

Another drawing technique of ellipses is drawing a glass or full of water. As you look at the rim of the glass or full of water, the rim of the glass will appear as an ellipse. Drawing the rim from different angles during from seeing it almost directly above to the front and the side. Ellipses drawn in perspective are shown on the next page.

VOLUME, SHAPE AND ELLIPSES

ELLIPSES AND DRAWING VOLUME

The drawing on the left shows ellipses in different positions, showing them at different viewing points. The image also shows how they can be integrated within the volume of the body, using the leg as an example.

SCAFFOLDING USING SIMPLE DRAPES

To understand the use of geometric shapes, a simple line can represent the structure of the body. It is helpful in representing the general form and posture of a figure. The simple line can represent:

The structure of the body and the simple line can represent:

The volume of the body and the simple line can represent:

The shape of the body and the simple line can represent:

Placing marks, making the body represent the quality of the line and shape that you draw.
