Anatomy Of The Eye:

Clinical Anatomy of the Eye Richard S. Snell, Michael A. Lemp, 2013-04-09 Clinical Anatomy of the Eye has proved to be a very popular textbook for ophthalmologists and optometrists in training all over the world. The objective of the book is to provide the reader with the basic knowledge of anatomy necessary to practice ophthalmology. It is recognised that this medical speciality requires a detailed knowledge of the eyeball and the surrounding structures. The specialist's knowledge should include not only gross anatomic features and their development but also the microscopic anatomy of the eyeball and the ocular appendages. The nerve and blood supply to the orbit, the autonomic innervation of the orbital structures, the visual pathway and associated visual reflexes should receive great emphasis. The practical application of anatomic facts to ophthalmology has been emphasised throughout this book in the form of Clinical Notes in each chapter. Clinical problems requiring anatomic knowledge for their solution are presented at the end of each chapter. Illustrations are kept simple and overview drawings of the distribution of the cranial and autonomic nerves have been included. **The Anatomy of the**

The book reviews significant progress in the anatomy of the eye and its physiological and biochemical aspects, particularly the structure of the tissues concerning the ocular fluid, the flow of aqueous humor, measurement of the intraocular pressure and the macromolecular composition of the vitreous. This edition is organized into four chapters and begins with an overview of the anatomy of the human eye, paying particular attention to the orbit and adnexa, the eyeball and motor and supporting apparatus of the eye. The reader is then introduced to the formation of ocular fluid, the structures in immediate contact with it in the ciliary body and the anatomical aspects of the vascular circulation in the ciliary body. An account of the chemistry of the aqueous humor and factors affecting the intraocular pressure is also given. The book concludes by discussing the structure and function of the vitreous, focusing on the gel vitreous and liquid vitreous as well as the rheological state and concentration of collagen, NaHA and proteins in the vitreous of various species from humans to frogs. This book is of interest to students and researchers in fields ranging from ocular science to physiology and biochemistry. *The Anatomy of the*
