**Paul Klee and His Illness** Hans Suter,2010 In 1933 Paul Klee s work was branded as Entartete Kunst Degenerate Art by the National Socialists and he was dismissed from his professorial post at the D sseldorf Academy of Fine Arts This led him together with his wife Lily to return to his real home of Bern Here his avant garde art was not understood and Klee found himself in unasked for isolation In 1935 Klee started to suffer from a mysterious disease The symptoms included changes to the skin and problems with the internal organs In 1940 Paul Klee died but it was only 10 years after his death that the illness was actually given the name scleroderma in a publication about Klee However the diagnosis remained mere conjecture Since his adolescence the dermatologist and venereologist Dr Hans Suter has been fascinated by Paul Klee and his art and more than 30 years ago this fascination spurred him to commence research into the illness and its influence on the art of Paul Klee s final years It was due to Dr Suter s meticulous investigations that Klee s illness could be defined as diffuse systemic sclerosis In this book the author assembles his findings and describes the rare and complex disease in a clear and comprehensible way Further he empathetically interprets more than 90 of Klee s late works The point of view of a dermatologist renders a unique source of information It provides on one hand new insights into everyday medical practices at the University of Bern in the 1930s which will fascinate doctors and local historians alike While on the other hand art historians and art lovers will be absorbed by the newly discovered links between Paul Klee s work and his illness    *Caring*
