Informatics in Medical Imaging George C.

Kagadis, Steve G. Langer, 2011-10-17 Informatics in Medical Imaging provides a comprehensive survey of the field of medical imaging informatics. In addition to radiology, it also addresses other specialties such as pathology, cardiology, dermatology, and surgery, which have adopted the use of digital images. The book discusses basic imaging informatics protocols, picture archiving and communication systems, and the electronic medical record. It details key instrumentation and data mining technologies used in medical imaging informatics, as well as practical operational issues such as procurement, maintenance, teleradiology, and ethics. Highlights: Introduces the basic ideas of imaging informatics, the terms used, and how data are represented and transmitted. Emphasizes the fundamental communication paradigms HL7, DICOM, and IHE. Describes information systems that are typically used within imaging departments: orders and result systems, acquisition systems, reporting systems, archives, and information display systems. Outlines the principal components of modern computing networks and storage systems. Covers the technology and principles of display and acquisition detectors and rounds out with a discussion of other key computer technologies. Discusses procurement and maintenance issues, ethics, and its relationship to government initiatives like HIPAA and constructs beyond radiology. The technologies of medical imaging and radiation therapy are so complex and computer driven that it is difficult for physicians and technologists responsible for their clinical use to know exactly what is happening at the point of care. Medical physicists are best equipped to understand the technologies and their applications, and these individuals are assuming greater responsibilities in the clinical arena to ensure that intended care is delivered in a safe and effective manner. Built on a foundation of classic and cutting edge research, Informatics in Medical Imaging supports and updates medical physicists functioning at the intersection of radiology and radiation.

Youth Activism in Environmental Politics, 2nd Edition Matt Henn, Sarah Pickard, 2023-02-02 Recently important new research has emerged to explain the large intergenerational cleavages in values and political preferences in many contemporary societies In most established democracies and many newer democracies young people are more likely to possess progressive values and are much more cosmopolitan in their outlook socially liberal accepting of cultural diversity and outward looking than older generations They tend to reject mainstream electoral politics and authoritarian nationalist forms of populism in favour of alternative progressive political parties and movements Indeed there is burgeoning evidence of a global tendency towards young people s support for and participation in new styles of non institutionalised political action that seem to better fit their life styles and to permit the actualisation of their political aspirations Although there is a considerable body of existing literature that examines the rise of such values and political participation preferences there is little work that focuses on the relationship with the prioritisation of environmental issues and environmental activism as evidenced in the September 2019 global climate strikes The goal of the current Research Topic is to explore the contemporary realities and patterns of youth participation in environmental politics in different societies As such we welcome manuscripts of original research and conceptualization that address the different practices of youth as they seek to effect environmental change and also their motivations for doing so Contributions are welcome from scholars youth practitioners and activists operating in a range of different settings and using diverse disciplinary and multidisciplinary and interdisciplinary perspectives
