Dasgupta ,2017-10-13 The Proterozoic aeon involved at least three major continental readjustments India and Antarctica appear in most models of supercontinent reconstructions but their relative position has been the subject of debate High resolution petrological and geochronological data especially from the Proterozoic mobile belts provide the principal means of resolving this issue The ice covered nature of Antarctica allows only limited access to the rocks and then only in coastal tracts so detailed studies in more accessible Proterozoic terrains in India assume added significance This volume a follow up to the XII International Symposium on Antarctic Earth Science Goa a SCAR symposium provides new data from selected locations in east Antarctica Enderby Land and Dronning Maud Land and from India including the Eastern Ghats Mobile Belt EGMB Chota Nagpur Gneissic Complex the Khasi Hills and the Aravalli Delhi Mobile Belt The presented geochronological data constrained by petrological studies are expected to provide new insights especially into the EGMB east Antarctica connection and the rate of continental readjustments in the post Rodinia break up **Remote Sensing of Sea**

Orcutt, Jason B. Sylvan, Cara M. Santelli, 2017-09-29 Igneous oceanic crust is one of the largest potential habitats for life on earth and microbial activity supported by rock water microbe reactions in this environment can impact global biogeochemical cycles However our understanding of the microbiology of this system especially the subsurface deep biosphere component of it has traditionally been limited by sample availability and quality Over the past decade several major international programs such as the Center for Dark Energy Biosphere Investigations the current International Ocean Discovery Program and its predecessor Integrated Ocean Drilling Program and the Deep Carbon Observatory have focused

on advancing our understanding of life in this cryptic yet globally relevant biosphere. Additionally, many field and laboratory research programs are examining hydrothermal vent systems, a seafloor expression of seawater that has been thermally and chemically altered in subseafloor crust, and the microbial communities supported by these mineral-rich fluids. The *Frontiers in Microbiology* 3 September 2017 Recent Advances in Geomicrobiology of the Ocean Crust papers in this special issue bring together recent discoveries of microbial presence, diversity, and activity in these dynamic ocean environments. Cumulatively, the articles in this special issue serve as a tribute to the late Dr Katrina J Edwards, who was a pioneer and profound champion of studying microbes that rust the crust. This special issue volume serves as a foundation for the continued exploration of the subsurface ocean crust deep biosphere.
