Quadrature Amplitude Modulation (QAM/DQAM).,2007 *PSpice for Analog Communications Engineering* Paul Tobin,2007-06-01 In PSpice for Analog Communications Engineering we simulate the difficult principles of analog modulation using the superb free simulation software Cadence Orcad PSpice V10 5 While use is made of analog behavioral model parts ABM we use actual circuitry in most of the simulation circuits For example we use the 4 quadrant multiplier IC AD633 as a modulator and import real speech as the modulating source and look at the trapezoidal method for measuring the modulation index Modulation is the process of relocating signals to different parts of the radio frequency spectrum by modifying certain parameters of the carrier in accordance with the modulating information signals In amplitude modulation the modulating source changes the carrier amplitude but in frequency modulation it causes the carrier frequency to change and in phase modulation it s the carrier phase The digital equivalent of these modulation techniques are examined in PSpice for Digital communications Engineering where we examine QAM FSK PSK and variants We examine a range of oscillators and plot Nyquist diagrams showing themarginal stability of these systems The superhetrodyne principle the backbone of modern receivers is simulated using discrete components followed by simulating complete AM and FM receivers In this exercise we examine the problems ofmatching individual stages and the use of double tuned RF circuits to accommodate the large FM signal bandwidth

Achelengwa,Massachusetts Institute of Technology. Department of Electrical Engineering and Computer Science,2011 The MIT iLab Project has developed online laboratories iLabs which are lab stations that can be accessed and controlled remotely over the Internet With iLabs students can conduct real experiments on real equipment over the Internet With the introduction of the National Instrument s Educational Laboratory Virtual Instrument Suite NI ELVIS in the development of iLabs students to gain a better understanding of engineering concepts by obtaining real data from electronic labs One of such crucial engineering concepts is telecommunications which plays a key role in transmitting information between people systems and computers There are

many telecommunication schemes which exist today The iLab developed in this thesis implements an experiment for studying one of such schemes Amplitude Modulation The NI ELVIS is used together with a device called the Emona Digital and Analog Telecommunications Experimenter DATEx to achieve the Amplitude Modulation lab setup This iLab is an Interactive iLab which gives one student at a time complete real time control over the lab set up The Amplitude Modulation iLab will permit students to tune various controls and observe the behavior and changes of relevant signals both in time domain and frequency domain It will also permit students to compare different signals and retrieve data locally for post processing
