

An extensive test programme led to the development and certification of an optional kit for the T77, including deflation valves on the main and towed-hyge bags, an alternate restraint thrust on the seatbelts of the aircraft, protection on the towed-hyge bags and for the hydraulic brake line and the speed brake control system, strengthening of the VIBI, D800 and ATC seats on the underside of the fuselage and various adaptations ("blow-away pins" beneath the engine brackets, the deflation on the forward-retracting nose wheel is of such nature that it cannot be blocked in the normal wheel and tail

Having won the decision to launch its third jet transport (after the 707 and 720 in November 1964, although the former commitment to put the new type into production had to wait until some orders were forthcoming). In the event, the point was reached on 18 February 1967 when the German airline Lufthansa announced a contract for 25 Boeing 737s (a price, including options, of about DM 1.2m (1.5m) each). The launch decision came after a period of intensive discus-

B737 Technical Guide:

The Boeing 737 Technical Guide Chris Brady, 2021-11-14 This is an illustrated technical guide to the Boeing 737 aircraft Containing extensive explanatory notes facts tips and points of interest on all aspects of this hugely successful airliner and showing its technical evolution from its early design in the 1960s through to the latest advances in the MAX The book provides detailed descriptions of systems internal and external components their locations and functions together with pilots notes and technical specifications It is illustrated with over 500 photographs diagrams and schematics Chris Brady has written this book after many years developing the highly successful and informative Boeing 737 Technical Site known throughout the world by pilots trainers and engineers as the most authoritative open source of information freely available about the 737

Advancements in Electric Machines J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research

achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external nancial support and drastic cline in the number of students interested in Power Electrical Engineering

Airport Passenger Terminal Planning and Design: Spreadsheet models and user's guide Landrum & Brown,2010 TRB s Airport Cooperative Research Program ACRP Report 25 Airport Passenger Terminal Planning and Design comprises a guidebook spreadsheet models and a user s guide in two volumes and a CD ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides in a single reference document the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals Volume 1 addresses the airside terminal building and landside components of the terminal complex Volume 2 of ACRP Report 25 consists of a CD ROM containing 11 spreadsheet models which include practical learning exercises and several airport specific sample data sets to assist users in determining appropriate model inputs for their situations and a user s guide to assist the user in the correct use of each model The models on the CD ROM include such aspects of terminal planning as design hour determination gate demand check in and passenger and baggage screening which require complex analyses to support planning decisions The CD ROM is also available for download from TRB s website as an ISO image
