Name \_\_\_\_\_

School \_\_\_\_\_

**DO NOT BEGIN UNTIL YOU ARE INSTRUCTED TO DO SO.**

This section of the competition consists of eight problems, which will be presented in pairs. Work on one pair of problems will be completed and answers will be collected before the next pair is distributed. The time limit for each pair of problems is six minutes. The first pair of problems is on the other side of this sheet. When told to do so, turn the page over and begin working. This round assumes the use of calculators, and calculations also may be done on scratch paper, but no other aids are allowed. All answers must be complete, legible and simplified to lowest terms. Record only final answers in the blanks in the left-hand column of the problem sheets. If you complete the problems before time is called, use the time remaining to check your answers.

**Security** SIKHAR PATRANABIS, Debdeep Mukhopadhyay, 2018-03-29 This book uses motivating examples and real life attack  
scenarios to introduce readers to the general concept of fault attacks in cryptography It offers insights into how the fault  
tolerance theories developed in the book can actually be implemented with a particular focus on a wide spectrum of fault  
models and practical fault injection techniques ranging from simple low cost techniques to high end equipment based  
methods It then individually examines fault attack vulnerabilities in symmetric asymmetric and authenticated encryption  
systems This is followed by extensive coverage of countermeasure techniques and fault tolerant architectures that attempt to  
thwart such vulnerabilities Lastly it presents a case study of a comprehensive FPGA based fault tolerant architecture for AES

fault tolerance can be combined with side channel security to achieve protection against implementation based attacks The
