Design and Implementation of Software Engineering for Modern Web Applications Moreb, Mohammed,2024-07-31

Software engineering is a basic concept in the digital age. The seamless operation of a website is integral to the functioning of businesses education government services and personal communications. As a foundation of our online interactions a website must be meticulously crafted to provide an outstanding user experience supported by an innovative user interface. It is essential to explore core services required to host, manage and access a secure modern website. Design and Implementation of Software Engineering for Modern Web Applications serves as a comprehensive guide to understanding the technologies and methodologies essential for designing, developing and maintaining modern secure websites. From domain structures and domain name systems to web protocols, database servers and web browsers are introduced to the network concepts critical to server technologies. Covering topics such as requirements engineering, web applications and website management, this book is an essential resource for postgraduate students, educators, web developers, researchers, academicians and more.

New Trends in Networking, Computing, E-learning, Systems Sciences, and Engineering

Khaled Elleithy, Tarek Sobh, 2014-11-27. This book includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science, Informatics and Systems Sciences and Engineering. It includes selected papers from the conference proceedings of the Ninth International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2013. Coverage includes topics in Industrial Electronics Technology. Includes chapters in the most advanced areas of Computing, Informatics, Systems Sciences and Engineering.

Accessible to a wide range of readership including professors, researchers, practitioners and students.

Artificial Immune Systems Paul S. Andrews, Jon Timmis, Nick D. L. Owens, Uwe Aickelin, Emma Hart, Andrew Hone, Andy Tyrrell, 2009-07-28. Artificial immune systems (AIS) is a diverse and maturing area of research that bridges the disciplines of immunology and engineering. The scope of AIS ranges from immune inspired algorithms and engineering solutions in software and hardware to the understanding of immunology through modeling and simulation of immune system concepts. AIS algorithms have been applied to a wide variety of applications including computer security, fault tolerance, data mining and optimization. In addition, theoretical aspects of artificial and real immune systems have been the subject of mathematical and computational models and simulations. The 8th International Conference on AIS (ICARIS 2009) built on the success of previous years, providing a forum for a diverse group of AIS researchers to present and discuss their latest results and advances. After two years outside Europe, ICARIS 2009 returned to England, the venue for the first ICARIS back in 2002. This year's conference was located in the historic city of York and was held in St. William's College, the conference venue of York Minster, northern Europe's largest Gothic cathedral.
