Integrated Smart Sensors Gert van der Horn,Johan Huijsing,2012-12-06 1 1 1 Introduction The signal processing and storage capacity ofthe human brain enables us to become powerful autonomous beings but only if our brains operate in conjunction with at least some of our senses and muscles Using these organs we can interact with our environment learn to adapt and improve important aspects of our life Similarly the signal processing capabilities of modern electronics computers could be combined with electronic sensors and actuators to enable interaction with and adaptation to the non electrical environment This willlead to smarter and more powerful automated tools and machines To facilitate and stimulate such a development easy to use low cost sensors are needed The combination of electronic interface functions and a sensor in an integrated smart sensor that provides a standard digital and bus compatible output would simplify the connection of sensors to standard electronic signal processors microcontrollers computers etc Currently the calibration procedure required for standardization of the sensor output signal level contributes largely to the production costs of accurate sensors To enable automation of the calibration procedure and hence reduce the sensor fabrication costs a digital calibrationjunction should be included in the smart sensor INTEGRATED SMART SENSORS Design and Calibration Introduction 1 2 Sensors and actuators In industry many processes are electronically controlled As depicted in Fig **C and the 8051: Hardware, modular programming, and multitasking** Thomas W.
