Les crustacés décapodes des Petites Antilles Joseph Poupin, 2018 The Lesser Antilles are an almost homogeneous insular region situated at the core of the Caribbean identified as a remarkably rich biodiversity hotspot of the western Atlantic. Featuring a total of more than one thousand crustacean species *Les Crustacés décapodes des Petites Antilles* presents for the first time the documented inventory of the shrimps, lobsters, hermit crabs and crabs of the region. This French language inventory is based on a literature search of roughly six hundred scientific contributions published over more than two centuries and integrates American, French, Dutch and Venezuelan research efforts. Also included are some unpublished data from recent expeditions to the French islands of Saint Martin, Guadeloupe and Martinique. Readers will find an up to date list of the species that both complies with the latest taxonomic revisions and supplies the source of each record. An analysis of the list provides a sampling history of the islands, the result of the inventory presented by families, islands and archipelagos, documentation of the major ecological habitats, a zoogeographic appraisal distinguishing marine and freshwater fauna and the prospects for new discoveries of undescribed species. This work illustrates many species in color with photographs taken in the laboratory and in the field.
