**Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges** Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets. These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response a series of international discussions on the nature of dual use life science arose. These discussions addressed the complex social, technical, political, security and ethical issues related to dual use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives **An**

**Introduction to Interdisciplinary Toxicology** Carey N. Pope, Jing Liu, 2020-02-18 An Introduction to Interdisciplinary Toxicology From Molecules to Man integrates the various aspects of toxicology from simple molecular systems to complex human communities with expertise from a spectrum of interacting disciplines. Chapters are written by specialists within a given subject such as a chemical engineer, nutritional scientist or a microbiologist so subjects are clearly explained and discussed within the toxicology context. Many chapters are comparative across species so that students in ecotoxicology learn mammalian toxicology and vice versa. Specific citations, further reading, study questions and other learning features are also included. The book allows students to concurrently learn concepts in both biomedical and environmental toxicology fields thus better equipping them for the many career opportunities toxicology provides. This book will also be useful to those wishing to reference how disciplines interact within the broad field of toxicology. Covers major topics and newer areas in toxicology including nanotoxicology, Tox21, epigenetic toxicology and organ specific toxicity. Includes a variety of perspectives to give a complete understanding of toxicology. Written by specialists within each subject area e.g. a chemical engineer to ensure concepts are clearly explained **The State of African Cities, 2014** United Nations Human Settlements Programme, 2013

Nairobi UN Habitat c2014 9789211325980 **The State of African Cities, 2014** United Nations Publications, 2015-09-10 The African continent is currently in the midst of simultaneously unfolding and highly significant demographic, economic, technological, environmental, urban and socio-political transitions. Africa's economic performance is promising with booming cities supporting growing middle classes and creating sizable consumer markets. Despite significant overall growth the continent continues to suffer under very rapid urban growth accompanied by massive urban poverty and many other social problems. These seem to indicate that the development trajectories followed by African nations since post-independence may not be able to deliver on the aspirations of broad-based human development and prosperity for all. This report therefore argues for a bold re-imagining of prevailing models in order to steer the ongoing transitions towards greater sustainability.

based on a thorough review of all available options That is especially the case since the already daunting urban challenges in Africa are now being exacerbated by the new vulnerabilities and threats associated with climate and environmental change
