R. Schroeder, Society of Automotive Engineers, 1988    Timing Belts 2007 Autodata, 2007    Injection Timing Requirements of a Diesel Engine Roger C. Bascom, 1955 The object of this work was to determine the injection timing requirements of a modern Diesel engine over its entire operating range. This was done by conducting performance tests at various injection timing settings for quarter, half, three quarter and full load conditions at 600, 900, 1200, 1500 and 1800 rpm. The engine tested was a single cylinder four cycle Diesel manufactured by the Nordberg Manufacturing Company. Results indicate that the engine is relatively insensitive to changes in injection timing but that it was possible to obtain up to 13.5 per cent improvement in economy with variable injection timing. The injection timing should have been advanced if the speed were increased or if the load were increased. The injection timing should not have been advanced to more than 32.5 degrees before top dead center nor retarded to less than 12.5 degrees before top dead center.
