**Fault Diagnosis of Hybrid Dynamic and Complex Systems** Moamar Sayed-Mouchaweh, 2018-03-27 Online fault diagnosis is crucial to ensure safe operation of complex dynamic systems in spite of faults affecting the system behaviors. Consequences of the occurrence of faults can be severe and result in human casualties, environmentally harmful emissions, high repair costs, and economical losses caused by unexpected stops in production lines. The majority of real systems are hybrid dynamic systems (HDS). In HDS, the dynamical behaviors evolve continuously with time according to the discrete mode configuration in which the system is. Consequently, fault diagnosis approaches must take into account both discrete and continuous dynamics as well as the interactions between them in order to perform correct fault diagnosis. This book presents recent and advanced approaches and techniques that address the complex problem of fault diagnosis of hybrid dynamic and complex systems using different model-based and data-driven approaches in different application domains: inductor motors, chemical process formed by tanks, reactors, and valves, ignition engine, sewer networks, mobile robots, planetary rover prototype, etc. These approaches cover the different aspects of performing single, multiple, online, offline, parametric, discrete, abrupt, tear, and wear fault diagnosis in incremental, non-incremental manner using different modeling tools: hybrid automata, hybrid Petri nets, hybrid bond graphs, extended Kalman filter, etc. for different classes of hybrid dynamic and complex systems.
