MAGNETS

PURPOSE

The purpose of this project is to show how magnets work with different types of materials.

RESEARCH

Magnets are made from iron, nickel, cobalt, and some alloys. They attract certain materials and repel others. Magnets are used in many different ways, from simple toys to complex machines.

HYPOTHESIS

I hypothesize that magnets will attract ferromagnetic materials like iron, nickel, and cobalt, and repel non-ferromagnetic materials like wood, plastic, and glass. I also think that the strength of the magnetic force will decrease as the distance between the magnet and the object increases.

PROCEDURE

Step 1:
Gather some small objects which are normally not attracted to magnets.
Step 2:
Bring a magnet close to the object.
Step 3:
Observe what happens. Does the object get attracted to the magnet? Does it get repelled? Does it have no effect?
Step 4:
Repeat the experiment with different objects and magnets.

MAGNETS WE SEE

CONCLUSION

The experiment showed that magnets attract ferromagnetic materials like iron, nickel, and cobalt, and repel non-ferromagnetic materials like wood, plastic, and glass. The strength of the magnetic force was found to decrease as the distance between the magnet and the object increased. This confirms the hypothesis that magnets work by attracting ferromagnetic materials and repelling non-ferromagnetic materials.
