1. How does the skeletal system assist with protection in the body?

The **bone marrow** produces blood, including the white blood cells that are part of the immune system. Bones also protect internal organs (heart, lungs, brain) from damage.

2. How does the structure of **compact bone** differ from the structure of **spongy bone**?

Compact Bone		Spongy (cancellus) Bone
Forms the outside of bones and most of the diaphysis ("nature of being across" shaft), osteons are close together		Found inside short, flat & irregular bones and in the epiphyses ("nature of being on top" ends) of long bones.

3. How does the overall structure of bone provide great strength and flexibility, but keep bone from being too bulky and heavy? <http://science.howstuffworks.com/life/6830-human-body-bone-strength-video.htm>

Bone is stronger than concrete (pound for pound) and stronger than any other natural material. Cells are hollow and have paper-thin walls, giving bone its light-weight structure. Calcium and phosphorus give bone its rigid strength, but ~ 1/3 of bone mass is soft and alive, allowing bones flexibility to bend. Every bone cell is replaced every 7 seven years, keeping bone strong.

4. What is an X-ray?

An x-ray is an invisible type of high energy radiation. Soft tissues are made of smaller atoms and don't absorb x-ray photons well. The calcium atoms in bone are larger and absorb x-rays better. That causes a picture of the bone to show up.

5. What are the different types of bone fractures and how are they identified on X-rays?

Comminuted	Depression	Compression
Break in several pieces, splintered/crushed	Fragment is pushed down, typically due to a blow to the skull	Collapse of vertebra, often due to osteoporosis ("holes in bones") or tumors or to being ejected from an ejection seat
Transverse	Oblique	Spiral
Complete break at right angle to bone axis, often from direct blow	Break has curved/sloped pattern, often caused by slanted blow	Caused by twisting force on bone, such as rotation to leg during skiing
Greenstick	Open	Closed
Incomplete, bone is bent & partially broken, most common form in kids	Bone breaks through skin—greater risk of infection	Bone breaks, but doesn't puncture skin

6. How can damage to a bone affect other human body systems?

Fat tissue from the bone marrow can leak into the blood, causing fat embolism syndrome, which can cause lung problems and seizures. If the skin breaks (open fracture), pathogens can enter the body and cause an infection.
